List of Tables

2.1 Recently studied Ribosome-inactivating proteins

3.1 Bioinformatics tools used in this study

4.1 Morphological characters of identified *Momordica balsamina*

4.2 Phytochemical analysis of fruit extract of *M. balsamina* shown the presence of various constituents

4.3 Antimicrobial activity of methanolic extract of *M. balsamina*

4.4 Antibacterial effect of methanolic extract of *M. balsamina*

4.5 Purification summary of balsamin

4.6 Comparison of N-terminal amino acid sequence of balsamin with those of other type 1 RIPs

4.7 Identification profile of the purified protein from *Momordica balsamina*

4.8 BLAST P analysis was performed with the protein sequences in the NCBI database

4.9 Secondary structure content

4.10 The biophysical and physicochemical parameters were predicted using the PROTPARAM tool of the Exaply protein analysis server

4.11 PDB BLAST analysis was performed with the deduced amino acid sequence of balsamin

4.12 The pseudo-energies of the predicted balsamin model together with their Z-scores with respect to scores obtained for high-resolution experimental structures

4.13 Interaction energies (kcal/mol) of the best conformation of the adenine docked into the binding site of modelled balsamin (target)

4.14 Interaction energies (kcal/mol) of the best conformation of the adenine docked into the binding site of alpha MMC (1F8Q; template)

4.15 Interactions involved between active centre atoms of balsamin and adenine

4.16 Interaction between active centre atoms of template (1F8Q; alpha MMC) and adenine
4.17 HIV-1 replication inhibition (%) in Primary CD4$^+$ T cells (from 1$^{st}$ donor) with different balsamin concentration

4.18 HIV-1 replication inhibition (%) in Primary CD4$^+$ T cells (from 2$^{nd}$ donor) with different balsamin concentration

4.19 HIV-1 replication inhibition (%) in Primary CD4$^+$ T cells (from 3$^{rd}$ donor) with different balsamin concentration

4.20 Jurkat T cell line infected with HIV-1 at moi 1 and 0.2. It was treated with 3.57 $\mu$M of balsamin and HIV-1 replication inhibition determined by RT assay

4.21 The effect of balsamin on HIV-1 replication was monitored viral release by RT assay
