LIST OF FIGURES

1. Tea growing areas in south India
2. Common effects of stress on infectious diseases caused by obligate and facultative parasites
3. Schematic representation of two pruning heights
4. Diagrammatic representation of a tea bush
5. Experimental design of yield compensation trial
6. Pattern of sporulation of *T. aculeata* under natural conditions
7. Schematic representation of the *in vitro* set up to study active dispersal pattern
8. Development of TSB in various clones (PDI)
9. Development of TSB in various clones (score values)
10. Effect of disease severity on yield of individual bushes
11. Effect of disease severity on yield in a population of bushes
12. Effect of harvesting methods on development of TSB
13. Effect of harvesting methods on bush height
14. Effect of harvesting methods on RCL levels in healthy and diseased bushes
15. Effect of time of pruning on fresh infection due to *T. aculeata*
16. Effect of fertilizer doses on TSB
17. Effect of timing of pruning, natural sporulation and weather conditions on TSB fresh infection
18. Effect of harvesting methods on root carbohydrates, disease incidence, bush height and yield
19. Effect of nitrogen and potassium nutrition on TSB incidence and yield
20. Management of thorny stem blight disease of tea
