CONTENTS

1.0 INTRODUCTION 01

2.0 MATERIALS AND METHODS 27

3.0 RESULTS 38

3.1 STATISTICAL INFERENCE (Descriptive Statistics)
  3.1.a. Descriptive statistics and 't' test for maternal serum, urine, hair, umbilical cord serum elements and infant and maternal anthropometry
  3.1.b. Descriptive statistics of the Maternal Serum Elements for HI, MI and LI group of Rural, Urban and Metropolitan Population.
  3.1.c. Descriptive statistics of Maternal Urine Elements for HI, MI and LI group of Rural, Urban and Metropolitan Populations
  3.1.d. Descriptive statistics of the Maternal Hair Elements for HI, MI and LI group of Rural, Urban and Metropolitan Population
  3.1.e. Descriptive statistics of the Umbilical Cord Serum Elements for HI, MI and LI groups of Rural, Urban and Metropolitan Population
  3.1.f. Descriptive statistics of the Infant and Maternal Anthropometry of HI, MI and LI group of Rural, Urban and Metropolitan Population

3.2 HEALTHCARE MODELS 66
  3.2.1. Multiple Linear Regression (MLR)
  3.2.2. Testing hypothesis in Multiple Linear Regression:
  3.2.3. Multiple Linear Regression for Maternal Anthropometry and Socio-Economic Status and Infant Birth Weight
  3.2.4. Multiple Linear Regression for Maternal Serum Elements and Infant Birth Weight
  3.2.5. Socio-Economic Anthropometry and Serum elements
  3.2.6. Multiple Linear Regression for Infant Anthropometry and Infant Birth Weight
3.3 LOGISTIC REGRESSION MODEL TO CORRELATE MATERNAL HEALTH (HYPERTENSION/ NORMAL) WITH MATERNAL ANTHROPOMETRY AND SOCIO-ECONOMIC STATUS

3.3.1. The Model
3.3.2. Diagonistic Check

3.4 FACTOR ANALYSIS FOR MATERNAL SERUM URINE, HAIR AND UMBILICAL CORD ELEMENTS OF HI, MI AND LI GROUP OF RURAL, URBAN AND METROPOLITAN POPULATION

3.4.1. The Model
3.4.2. Deriving factors and assessing overall fit
3.4.4 Interpreting the factors

4.0 DISCUSSION
