SUGGESTIONS FOR FURTHER RESEARCH

The following research problems are suggested for further studies.

❖ In the present study, only one learning approach namely ABL is taken for investigation. It was compared with traditional conventional method of instruction. It is suggested that the other learning approaches like ALM (Active Learning Method) may be examined and its effectiveness may be studied as against the conventional method.

❖ The similar studies should be undertaken in the rest of content unit of science syllabus. Subjects like Tamil, English, Maths, and Social Science may be considered for studying the effectiveness of ABL methods.

❖ ABL approach may be undertaken either at primary level or at higher secondary level.
