The researcher found that this study will be supportive in the area of business management. It will be of massive importance as a contribution to database on women entrepreneurs. This study may be helpful to the government officials, policy making and other governmental and non-governmental agencies which are functioning for development of women entrepreneurship. This may be helpful for women entrepreneurs themselves for developing their business into successful enterprises. Based on the results and discussions, the researcher makes following recommendations:

- Women empowerment programmes should be organized by the government, private sector and NGOs to encourage more women to start their own business. This will enable them to make more contribution to the nation’s economic development in terms of poverty alleviation, job creation, wealth creation and economic vitality.

- To cope with the multiple roles as wives, daughters, mothers and economic drivers, women entrepreneurs should choose the type of businesses that will help them to accomplish these roles. They should be mentally and strategically prepared for their new life style after the establishment of business.

- There should be adequate women participation at all levels of policy making, related to the development of business enterprises.

- The current policies and schemes should be regularly monitored in order to assess their effectiveness and shortcomings.

- The government should maintain accurate national level data pertaining to existing women entrepreneurs in the country. It should be timely upgraded so that new policy may be framed for the development of women entrepreneurs.

- Training programmes should be designed to promote women entrepreneurship and women entrepreneurs should be motivated to learn technical and business skills. Special attention should be given to the small women entrepreneurs while designing and implementing the various Entrepreneurship Development Programmes (EDPs).
Effort should be made to establish proper networking among various governmental and non-governmental organizations and awareness campaign should be initiated about the various entrepreneurial opportunities available for women entrepreneurs.

Financial institutions should provide more awareness regarding the different schemes and finance available for credit. The loan procedure should be liberal. They can also help in encouraging women entrepreneurs by increasing the proportion of their loan advancement to women so as to increase their accessibility to required credit. Consequently, more women will be interested in initiating and running their own business.

Certain marketing centers must be established exclusively for women entrepreneurs for the exhibitions of their products.

Women entrepreneurs should take out time to consider the challenges other women in business are facing and find out how best those challenges could be tackled before taking the decision of going into business. If women entrepreneurs were more aware of the challenges they might face, they could better prepare mentally and strategically for their new lifestyle.

Case studies of successful women entrepreneurs should be developed and published in order to motivate other potential women entrepreneurs.

Special awards for women entrepreneurs should be initiated in order to recognize and appreciate their contribution towards the economy.

Based on the results and findings of the study, the researcher suggests the following research studies to be undertaken in future, so that a women entrepreneur gets more recognition and acceptance:

- Similar study with area specific samples.
- Comparative studies of women entrepreneurs between districts and states.
- Studies including the perception of others regarding women entrepreneurs can be undertaken.
- Study may be conducted on the training needs of women entrepreneurs.
- Similar studies can be undertaken on other aspects of management.
