CHAPTER V
CONCLUSIONS, SUGGESTIONS AND LIMITATIONS

5.1 CONCLUSIONS

The analysis of the data obtained in the study showed the following results;

- Disable and non disable person differ on the following personality factors;
  - Reserved vs. Outgoing
  - Affected by felling vs. Emotionally stable
  - Sober vs. Happy-go-lucky
  - Shy vs. Venturesome
  - Artlessness vs. shrewdness
  - Untroubled adequacy vs. guilt proneness
  - Group dependent vs. Self-sufficient
  - Low ergic tension vs. High ergic tension

- Disable and non disable person do not differ on the following personality factors;
  - Low intelligent vs High Intelligent
➤ Submissness vs. Dominance

➤ Weaker Super Ego Strength vs. Stronger Super Ego Strength

➤ Harria vs. Premsia

➤ Alaxia vs. Protension

➤ Praxernial vs. Autia

➤ Conservativism of Temperament vs. Radicalism

➤ Low Self Sentiment vs. High Strength of self Sentment

• Urban and rural population were found significantly differ on the following personality factors;
  ➤ Reserved vs. Outgoing
  ➤ Low intelligent vs High Intelligent
  ➤ Shy vs. Venturesome
  ➤ Artlessness vs. shrewdness
  ➤ Conservativism of Temperament vs. Radicalism

• Urban and rural population do not differ significantly on following personality factor;
  ➤ Affected by felling vs. Emotionally stable
  ➤ Sober vs. Happy-go-lucky
  ➤ Submissness vs. Dominance
- Weaker Super Ego Strength vs. Stronger Super Ego Strength
- Harría vs. Premia
- Alaxia vs. Protension
- Praxernial vs. Autia
- Untroubled adequacy vs. guilt proneness
- Group dependent vs. Self-sufficient
- Low ergic tension vs. High ergic tension
- Low Self Sentiment vs. High Strength of self Sentiment

- Interaction effect of disable/ nondisable and inhabitance was found on following personality factor at .05 and .01 level of confidence level;
  - Reserved vs. Outgoing
  - Affected by feeling vs. Emotionally stable
  - Shy vs. Venturesome
  - Sober vs. Happy-go-lucky
  - Placid vs. Apprehensive
  - Conservatism of Temperament vs. Radicalism
  - Low ergic tension vs. High ergic tension

- Interaction effect of disable/ nondisable and inhabitance was not found on following personality factor;
  - Less intelligence vs. More intelligent
  - Obedient vs. Assertive
➢ Sober vs. Happy-Go-Lucky
➢ Expedient vs. Conscientious
➢ Alaxia vs. Protension
➢ Praxernal vs. Autia
➢ Artlessness and Shrewdness
➢ Group dependent vs. Self-sufficient
➢ Undisciplined self conflict Vs Controlled
➢ Low ergic tension vs. High ergic tension

• Disable and non disable person were found significantly differ on their level of adjustment.

• Rural and urban population were not found significantly differ on their level of adjustment.

• Interactional effect of disable/ non disable and inhabitance was found significantly differ on persons' level of adjustment.

5.2 LIMITATIONS AND SUGGESTIONS

In any Social Science investigation, the external validity of the results of the study is limited by many constrains related to the sample selection/availability, research design, reliability and validity of the tools under study and number of variables feasible to study at a time. Thus the researcher has been able to sort out the following limitation in the present study and the suggestions to refine the same have been provided.
Focus of the study was restricted to Maharashtra State only. It can be spread into other areas also.

The present study done on the physically disable, but personality growth within the individual is a continuous process which starts from the beginning of the life. A longitudinal study from infancy to adolescence would be more appropriate to enhance the knowledge regarding factor that affect personality development in disable person.

The personality and adjustment of disable and non disable person affected by numerous variables, however in the present study limited variable i.e. inhabitance. In further studies, effect of other variables like body image, peer relationships, parent-child relationship, order of Birth, Social Motives, etc. on personality & adjustment can be studied.

The sample of the study was small. The study can also be done by taking large sample size.

The personality of male and female physically disable was not studied though it was seen in number of studies that gender role identity is also a factor work in personality development and adjustment level of person. In further studies gender variables can be studied as independent variables.
