CONTENTS

ACKNOWLEDGEMENT ................................................................. i
NOTATIONS ........................................................................ iii
LIST OF SYMBOLS ............................................................... iv

INTRODUCTION ........................................................................ 1

Chapter I  PRELIMINARIES ............................................................. 7
1.1 A brief survey of labelings .............................................. 7
1.2 Basic definitions and results ......................................... 19

Chapter II INTEGRAL SUM GRAPHS ........................................... 35
2.1 Introduction ................................................................... 35
2.2 On integral sum graphs ................................................. 36
2.3 On sum graphs ............................................................... 107

Chapter III SUPER EDGE-MAGIC GRAPHS ................................ 121
3.1 Introduction ................................................................... 121
3.2 On super edge-magic graphs ......................................... 123
3.3 Some general results on super edge-magic graphs .......... 149

Chapter IV SUPER MAGIC STRENGTH AND SUPER EDGE-MAGIC DEFICIENCY OF GRAPHS ............................. 154
4.1 Introduction ................................................................... 154
4.2 On the super magic strength of graphs ......................... 155
4.3 The super edge-magic deficiency of graphs ................... 159

Chapter V DIVISOR GRAPHS ...................................................... 173
5.1 Introduction ................................................................... 173
5.2 On divisor graphs .......................................................... 173
