LIST OF TABLES

1. Meteorological factors.
2. Computed values of evapotranspiration.
3. Computed values of runoff.
4. Distribution of rainfall in SW and NE monsoon.
5. Average monthly rainfall of six stations.
6. Coefficient of variation of rainfall.
7. Number of streams of respective order and bifurcation ratio.
8. Stream length, mean stream length ratio of respective order.
9. Regressions of stream length on stream order.
10. Regression of stream number on stream order.
11. Areal aspects of sub-basins.
12. Drainage nature of sub-basins.
14. Relations between maximum/minimum depth of drilling and their respective yield.
15. Layer parameters using vertical electrical sounding (VES)
16. Depth to water levels in basalts.
17. Depth to water levels in phyllites.
18. Depth to water levels in granitic gneisses.
19. Depth range of groundwater level in basalts.
20. Depth range of groundwater level in phyllites.
21. Depth range of groundwater level in granitic gneisses.
22. Seasonal water level fluctuation (phyllites, basalts, granitic gneisses).
23. Methods employed in chemical analysis.
22. Seasonal water level fluctuation (phyllites, basalts, granitic gneisses).
23. Methods employed in chemical analysis.
24. Partial chemical analysis of groundwater samples.
25. Calculated parameters of groundwater samples.
29. Samples with high contents of some constituents.
30. Values of log activity of mineral species.
31. Values of saturation index of mineral phases.
32. Correlation matrix of different variable.
33. Principal components of 11 variables.
34. Principle component scores.
35. Hydrochemical facies, TDS value in relation to rock type, location and elevation.
36. Relation between bore wells and geomorphic units.
37. Yield of bore wells with respect to litho units, geomorphic units and lineaments.
