# Contents

## Chapter 1: Introduction

1.1. Research Objectives .......................... 1
1.2. Overview of Thesis .......................... 2

## Chapter 2: Literature Review

2.1 Introduction .................................. 13
2.2 The E-learning Technologies ................. 14
   2.2.1. History ................................ 14
   2.2.2. Multimedia and Content Development .. 17
   2.2.3. Instructional Design Theories and Software Engineering .. 19
   2.2.4. Simulation Technologies and techniques .. 21
      2.2.4.1. Simulation .......................... 21
      2.2.4.2. Virtual and Remote Control Labs .. 24
   2.2.5. E-commerce based Distribution and Management Systems .. 25
   2.2.6. Networking and Collaborative Systems .. 25
   2.2.7. Reusable Learning Objects (RLO) and E-learning Standards .. 25
   2.2.8. Mobile computing ......................... 26
   2.2.9. CD Security ............................ 26

## Chapter 3: Generalized strategy and Implementation

3.1. Effective use of Multimedia and Computer Technology .......................... 28
3.2. Software Simulation Tools and Technologies ........................................ 30
3.3. Strategy to Selection of Appropriate Tools and Technology ..................... 41
3.4. Pedagogy Rules for Effective Multimedia Based E-learning Softwares .......... 45
3.5. Technique for Optimizing Teaching-Learning Process .................................. 49
3.6. Case Study: E-learning Software for C language ..................................... 63
3.7. Further Optimization Using Student Model ............................................. 68
3.8. Revised Case Study ................................... 78
3.9. Collaborative Techniques ........................................... 85
3.10. Multimedia Based Standalone M-Learning Applications for Series ............... 86
60 Nokia Devices ........................................ 96

## Chapter 4: Other Simulation Techniques and Security

4.1. Generalized Pseudo Algorithms Simulation Technique (PAST) for E-Learning to Develop Data Structures Algorithms Simulation Software .................. 103
4.4. Configurable CD Security Technique for E-Learning-CD Containing Set of Executables Clips ........................................... 133

## Chapter 5: Generalized E-learning Content Development Methodology based on Software Engineering Principles

5.1. Brief Explanation of Phases, Stages of the Methodology ......................... 150
5.2. Steps Covered in the Basic Generalized Strategy
5.3. Role of EPP in Detail

Chapter 6: Result Analysis and Discussion
6.1. Generalized strategy
6.2. Pseudo Simulation E-learning Technique
6.3. New E-learning Approach for Microprocessor
6.4. Innovative E-learning Software for Graphics
6.5. E-learning CBT Security Mechanism
6.6. Software Engineering Based E-learning Content Development Methodology

Chapter 7: Conclusions

References
