My beloved Supervisor Prof. S.C. Joseph is no more. He was the inspiration behind my academic and research career. I did my M.Litt. under his supervision. Subsequently, I had registered for Ph.D. also with him. When he left the University of Madras in 1979, he ceased to be my supervisor on technical interpretation of rules. Had he been alive, I would have had the benefit of his advice, correction and revision of the draft, for he continued to evince interest in my work. Unfortunately, he died on 4th December 1980. I owe deep debt of gratitude to him and dedicate this work to his memory.

Since 1979, I pursued my research work as an independent candidate.

I thank the managements of the twenty four factories which supplied me with essential data from their files. I am indebted to the Offices of Madras Stock Exchange, Director of Industries and Commerce and the Director of Statistics, Government of Tamil Nadu, for their considerate response to my requests. I should also like to record my sincere thanks to the Librarians and the staff of the Libraries of Autonomous Post-Graduate Centre, Trichy, University of Madras, Connemara and St. Joseph's College, Trichy, for their helpful services.
I am thankful to the University authorities for having permitted me to pursue research, and to our Director, Dr. P.K. Ponnuswamy for his active encouragement. I thank Prof. S. Neelakantan, who inspired me and gave enlightened suggestions. He saw through the thesis to the present form. I am happy to admit, with a deep sense of gratitude, that de facto he was my guide during the final and crucial stages of this work. Acknowledgements are also due to my colleagues in the Department, Dr. V.B. Athreya, Dr. E. Max and Miss S. Lakshmi for cheering me during difficult times. I record my indebtedness to the research scholars of our department, Mr. N. Jaganathan and Mr. G. Rajendran for their assistance.
