## List of Plates

<table>
<thead>
<tr>
<th>Plates</th>
<th>Page No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Four earthworms species</td>
<td>33</td>
</tr>
<tr>
<td>2. Broth cultures of microbial inoculants for compsoing of coir pith and coffee husk</td>
<td>93</td>
</tr>
<tr>
<td>3A. The setting up of a vermireactor for coir pith recycling with different feed ratios.</td>
<td>58</td>
</tr>
<tr>
<td>3B. (a) Pure coir pith, (b) Cowdung vermicasts, (c) Coir pith vermicasts</td>
<td>58</td>
</tr>
<tr>
<td>4A. The setting up of vermireactors with different feed ratios for coffee husk recycling</td>
<td>76</td>
</tr>
<tr>
<td>4B. (a) Pure coffee husk, (b) Coffee husk vermicasts along with remaining feed, (c) Pure coffee husk vermicasts</td>
<td>76</td>
</tr>
<tr>
<td>5A. Coir pith compost reactors(A,A, to 1,1,) on the initial day of composting</td>
<td>93</td>
</tr>
<tr>
<td>5B. Coir pith compost reactors(A,A, to 1,1,) on the 90th day of composting</td>
<td>93</td>
</tr>
<tr>
<td>6A. Coffee husk compost reactors(A,A, to 1,1,) on the initial day of composting</td>
<td>104</td>
</tr>
<tr>
<td>6B. Coffee husk compost reactors(A,A, to 1,1,) on the 90th day of composting</td>
<td>104</td>
</tr>
<tr>
<td>7A. Setting up of vermireactor with composted coir pith (CPA-CPI) for vermitreatment with <em>L.mauriti</em>.</td>
<td>117</td>
</tr>
<tr>
<td>7B. Setting up of vermireactor with composted coffee husk (CHA-CHI) for vermitreatment with <em>L.mauriti</em>.</td>
<td>123</td>
</tr>
<tr>
<td>8. Effect of coirpith vermicasts on gemination of Blackgram (<em>Vigna mungo</em> (L) Hepper cv T-9) seeds on 4th and 8th day</td>
<td>129</td>
</tr>
<tr>
<td>9. Effect of coffee husk vermicasts on gemination of Blackgram (<em>Vigna mungo</em> (L) Hepper cv T-9) seeds on 4th and 8th day</td>
<td>130</td>
</tr>
<tr>
<td>10. Effect of coirpith vermicasts on Blackgram (<em>Vigna mungo</em> (L) Hepper cv T-9) plants in pot study experiment on 15th and 60th day</td>
<td>137</td>
</tr>
<tr>
<td>11. Effect of coffee husk vermicasts on Blackgram (<em>Vigna mungo</em> (L) Hepper cv T-9) plants in pot study experiment on 15th and 60th day</td>
<td>138</td>
</tr>
<tr>
<td>12. Full growth of mycelium of plant pathogens in a media containing 20% of distilled water</td>
<td>146</td>
</tr>
<tr>
<td>13A. Full growth of plant pathogen <em>Rhizoctonae solani</em> (mycelium) in the media containing 20% water extract of pure coir pith</td>
<td>147</td>
</tr>
</tbody>
</table>
13B. Suppressed growth of the plant pathogen *Rhizoctonia solani* (mycelium) in the media containing 100% CPVC (20%) extract at 12, 24 and 72hrs 147

14A. Full growth of plant pathogen *Rhizoctoniae solani* (mycelium) in the media containing 20% water extract of pure coffee husk 148

14B. Suppressed growth (radial) of the plant pathogen *Rhizoctonia solani* (mycelium) in the media containing 20% water extract of

1 1 1CD CH vermicasts at 12hrs and 24hrs 148
2 1 3CD CH vermicasts at 72hrs 148

15A. Full growth of plant pathogen *Rhizopus stolonifer* (mycelium) in the media containing 20% water extract of pure coir pith 149

15B. Suppressed growth (radial) of the plant pathogen *Rhizopus stolonifer* (mycelium) in the media containing 20% water extract of

1 Pure coir pith vermicast at 12hrs and 24hrs 149
2 1 3CD CP vermicasts at 24hrs 149

16A. Full growth of plant pathogen *Rhizopus stolonifer* (mycelium) in the media containing 20% water extract of pure coffee husk 150

16B. Suppressed growth (radial) of the plant pathogen *Rhizopus stolonifer* (mycelium) in the media containing 20% water extract of

1 Pure coffee husk vermicasts at 12hrs and 24hrs 150
2 1 3CD CH vermicasts at 24hrs 150
