

CONTENTS

CHAPTER – I

1- 61

General introduction on the selected drugs and the chromogenic reagents used for their analysis

- 1.01 Selected Drugs
- 1.02 Typical Instrumental Techniques
- 1.03 Classification of Functional groups in Drugs
- 1.04 Classification of organic reactions and reagents
- 1.05 Selection of reagents in organic analysis
- 1.06 Analytical utility of chromogenic reagents and the chemistry of colored species formed in the present investigation.
- 1.07 General methodology for the development of new visible spectrophotometric methods.

CHAPTER – II

62-143

Spectrophotometric determination of ADCA using various chromogenic reagents

- 2.01 Introduction
- 2.02 Experimental Results and Discussion
- 2.03 Conclusions

CHAPTER – III

144-220

New visible spectrophotometric methods for the assay of Rifabutin

- 3.01 Introduction
- 3.02 Experimental Results and Discussion
- 3.03 Conclusions

CHAPTER - IV

221-238

Analytical utility of various chromogenic reagents for the spectrophotometric determination of Azelaic acid in bulk and dosage forms

4.01 Introduction

4.02 Experimental Results and Discussion

4.03 Conclusions

CHAPTER - V

239-265

Spectrophotometric determination of Capecitabine in bulk and dosage forms

5.01 Introduction

5.02 Experimental Results and Discussion

5.03 Conclusions

CHAPTER VI

266-283

Evaluation of various chromogenic reagents in the spectrophotometric analysis of Clostebol acetate

6.01 Introduction

6.02 Experimental Results and Discussion

6.03 Conclusions

SUMMARY

284-289
