ACKNOWLEDGEMENTS

Foremost, I would like to thank God for his bountiful blessings, the skills, opportunities, patience, good health, will power and perseverance that have enabled me to pursue a research career. Completion of this thesis is one of his many blessings on me.

This thesis would have not materialized without the enthusiastic supervision of my research guide Dr. P. A. Loka Bharathi who has nurtured my ingenuity ever since my inception in her research group. Her constant words of encouragement, support, guidance in literary and technical matters, confidence in my ability, careful correction of manuscript drafts/chapters and advice have enabled me to develop a better understanding of microbial ecology. The extensive evening discussions/learning sessions over a stimulating cup of green tea she prepared for me will never be forgotten. A mentor like her is difficult to find and I thank Dr. Loka profusely for accepting me.

I would like to express my gratitude to Dr. S. R. Shetye, Director, National Institute of Oceanography, Goa for the facilities.

Many thanks to Prof. G. N. Nayak, Dean, Dept. of Life Sciences & Environment, Goa University, Prof. P. V Desai, ex-Dean, Prof. H. B. Menon, Head, Dept. of Marine Sciences, Goa University and the staff of the Marine Sciences Dept. for their support.

Dr. C. T. Achuthankutty (Retd. Scientist, NIO-Goa) and Dr. Savita Kerkar (Reader, Dept. of Biotechnology, Goa University) deserve a special thanks as my thesis committee members. Their invaluable advice and critical comments broadened my perspective on the subject and helped to make timely amendments in the study.

I wish to express my appreciation to Dr. Shanta Achuthankutty for taking intense academic interest in this work. Her valuable suggestions especially prior to the pre-synopsis presentation helped to improve the flow of the thesis. She has always been
approachable, encouraging and supportive. Her positive attitude has been very stimulating.

Special thanks are due to Dr. Maria Judith Gonsalves who made many valuable suggestions that improved the quality of this study. Her expertise and guidance enabled me to produce predictive models for benthic denitrification.

I am grateful to the Council of Scientific and Industrial Research, Govt. of India for the award of Senior Research Fellowship (2006-09) which enabled me to cover expenses incurred during the course of the study.

I would also like to thank the Embassy of France in India for the award of Sandwich PhD Scholarship 2008 which has enabled me to carry out a part of the work at Laboratoire de Microbiologie Géochimie et Ecologie Marines (LMGEM), Marseille, France. My French co-supervisors - Dr. Patricia C. Bonin & Pr. Valérie D. Michotey at LMGEM are acknowledged for giving me an opportunity to work under their esteemed guidance. I appreciate their help with the experimental setup, discussions, suggestions, careful cross-checking of all calculations, inputs on the improvement of the manuscripts and continued guidance during the experimental work carried out at the home institute. I greatly appreciate their warm hospitality throughout my stay in Marseille. Many thanks to Ms. Sophie Guasco, Dr. Monique Aquaviva for technical assistance during molecular analysis, Dr. Nicole Garcia for assistance in nutrient analysis and the entire staff of LMGEM who made my research work rewarding. Dr. Richard Sempere, Director LMGEM, Biogéochimie is thanked for the facilities. Thanks to my pet King Shiloh who kept me company at bâtiment B and friends at the Luminy campus.

High-throughput pyrosequencing in the present study was carried out under the aegis of ICoMM (International Census of Marine Microbes) and supported by the W.M. Keck Foundation grant to the Marine Biological Laboratory (MBL) at Woods Hole. I am grateful to Dr. Linda Amaral Zettler, Associate Research Scientist, MBL for her support.
Special thanks to Prof. David Kirchman, University of Delaware for briefing us on bacterial diversity analysis.

I am thankful to Dr. Wajih Naqvi and his team for discussions at the initial stages of the experimental work, Dr. Prabhat Gupta (NPL, New Delhi) for providing the N₂O standard, Dr. S. N. Harkantra, Dr. Baban Ingole and their students for the macrofaunal identification, ex project leader Dr. K. A. Kamesh Raju for his continued support, Dr. Sujata Kaisary, Dr. M. Wafar, Dr. Mangesh Gauns and Mr. Vasudev Mahale for their kind help, Dr. M. P. Tapaswi, Head Librarian who promptly sought and delivered the unavailable manuscripts whenever I mailed him a request, Mr. Uchil, DTP section for refining some of the figures incorporated in the thesis and Mr. V Subramaniam and Mr. Yeshwant Talkatnal for their co-operation and help.

I am grateful to my friends Christabelle, Dr. Krishnan, Sujith, Anindita, Dr. Sree, Divya, Feby, Sunita, Geeta, Shanti, Dr. Sanitha, Dr. Sini, Dr. Donna, Dr. Sandhya, Dr. Jane, Sanjay, Amar, Rajdeep who have whole heartedly extended their help whenever required. I want to express my gratitude to friends from BOD, COD, POD, GOD, MCMRD, ITG and the Admin staff for their enduring support. Mr. Santosh Shirodkar is especially thanked for help rendered during sample collection. Thank you RD. Your support, constant motivation and belief in me have been incredible.

I am honoured to have a loving and supportive family who have been by my side through the most difficult times. They have instilled the values of hard work and respect. I am forever indebted to my parents for their understanding, incessant patience and encouragement when it was most required. It is to them that I dedicate this work.
