ACKNOWLEDGEMENTS

At the outset I, the researcher of the study wish to express my heartfelt gratitude to the Lord Almighty and all those who have made this dissertation a possibility. I would at the onset like to extend my sincere gratitude to the Acharya Nagarjuna University for having given me this opportunity to undergo the Extra mural Ph.D programme.

I would like to place on record my sincere gratitude to Prof. P. Syama Thrimurthy Head, Department of Adult & Continuing Education, for her valuable insights, and guidance in the successful completion of this dissertation piece.

I am indebted to Dr. Phani Bushan Medical Superintendent of Government General Hospital, Guntur for his support, encouragement and facilitation needed infrastructure in making this endeavor a reality.

Professor AV. Raman as a mentor has been dependable source of encouragement and guidance in and through this continues effort.

I owe an inestimable debt of gratitude to the entire faculty in Adult & Continuing Education for their price less encouragement and timely suggestion in this endeavor.

Professor Sinimole K.R, Head of the Quantitative methods and statistics in St. Francis Institute of management and research Mumbai was a subtle motivator, and constant encouragement given in Analytical approach which gave me self confidence in pursuing the research work to completion.

I acknowledge the timely help and advice given by all the experts who so willingly gave their time and suggestions for content validity and tools.
Dr. Francs M, Director of St. Francis Institute of management and research Mumbai, I am indebted and thankful for his expert guidance and encouragement given throughout the period of study.

I place on record my deepest appreciation to the support rendered by Mr. Narasimhareddy for his computerization and graphic representation of the manuscript.

I acknowledge with grateful thanks the sincere and fortitude on the part of Anuradha, Vasundhara and their family members to bear with me during the entire period of study. They were source of inspiration for me.

I acknowledge and offer a word of cheer to all my family members. Friends and well wishes who have assisted, guided and cooperated directly or indirectly for completion of my study.

I deeply thank my society St. Ann's Congregation Phirangipuram Guntur especially Mother Fatima Mary Superior general and sisters for their unconditional love, prayer and support. Words are inadequate to express my profound appreciation and administration to my beloved St. Monica’s Convent sisters and students of St. Ann’s college of Nursing Chowdavarm for their service and cooperation in the completion of the thesis.

This dissertation will remain an unsung song if I fail to thank the mother's and neonates at postnatal wards of Government General Hospital who have served as a platform and allowed me to try and test the risk factors that I so boldly account in this dissertation.
