Synopsis i-xiii

CHAPTER-I

Stereoselective total synthesis of (+)-strictifolione and (6R)-6[(E, 4R, 6R)-4, 6-dihydro-10-phenyl-1-decenyl]-5, 6-dihydro-2H-2-pyrene

Section-A: Introduction to \( \alpha, \beta \)-unsaturated \( \delta \)-lactones 1-7

Section-B: Stereoselective total synthesis of (+)-strictifolione

- Previous synthetic approaches 8-15
- Present work 16-23
- Experimental section 24-36

Section-C: Stereoselective total synthesis (6R)-6[(E, 4R, 6R)-4, 6-dihydro-10-phenyl-1-deceny]-5, 6-dihydro-2H-2-pyrene

- Previous synthetic approaches 37-39
- Present work 40-45
- Experimental section 46-52
- References 53-55

CHAPTER-II

Stereoselective total synthesis of botryolide-E

Section-A: Introduction to \( \alpha, \beta \)-unsaturated \( \gamma \)-lactones 56-62

Section-B: Stereoselective total synthesis of botryolide-E

- Previous synthetic approaches 63-65
- Present work 66-74
- Experimental section 75-86
- References 87-89
CHAPTER-III

Development of new synthetic methodologies

Section-A: Introduction to α-amido sulfones
- Introduction 90-99
- References 100-102

Section-B: Synthesis of α-aminophosphonates from α-amidosulfones using Iron (III) chloride as an inexpensive and efficient catalyst
- Introduction 103-109
- Present work 110-117
- Experimental section 118-122
- References 123-125

Section-C: Synthesis of gem-dihydroperoxides using NaHSO₄-SiO₂ as a heterogeneous catalyst
- Introduction 126-129
- Present work 130-135
- Experimental section 136-139
- References 140-141

Section-D: Benzylation and allylation of naphthols using amberlyst-15 as a heterogeneous and reusable catalyst
- Introduction 142-148
- Present work 149-154
- Experimental section 155-159
- References 160-160
