Acknowledgements

The past four-and-a-half years of my doctoral studies at the Centre for Soft Matter Research, was a dream come true. Special thanks are due to my research guide, Dr. S Krishna Prasad, who has been very supportive and encouraging all through. I am deeply indebted to him for giving me the opportunity to work on the fascinating subject of Liquid Crystals under his supervision. He has inspired me both professionally and personally. I thank him for his invaluable advice and guidance.

I am ever grateful to Dr. D S Shankar Rao, and Dr. Geetha G Nair for teaching me the many experimental techniques required in the lab with at most patience and skill. I would also like to thank them for a critical reading of the manuscript. Thanks are also due to Dr. C V Yelamaggad and Dr. Uma S Hiremath who not only provided certain compounds used in this work, but have time and again helped with chemistry-related issues.

I take this opportunity to profusely thank Prof. K A Suresh, former Director, for all the support and encouragement. I would also like to thank Dr. P Asthana, Acting Director, for all the facilities provided. It was a pleasure to be associated with Academician Alexander G Petrov, and Dr. Y G Mannov, Institute of Solid State Physics, Sofia, in a collaborative work on the flexoelectric and photoflexoelectric properties, during their brief but fruitful visits to our institute. I gratefully acknowledge the travel support provided by the Department of Science and Technology which facilitated my participation in the “12th International Conference on Ferroelectric Liquid Crystals” held in Zaragoza, Spain, 2009.

The entire administrative staff of the Centre need a special mention for their wholehearted support during the entire period of my stay in the Centre.

My sincere thanks are due to Prof. K M Balakrishna, and Prof. S M Dharma Prakash, Department of Physics, Mangalore University for all their guidance and help with the official matters of the University.
