ACKNOWLEDGEMENT

This study has been completed as a joint effort involving the cooperation and forebearance of a host of persons. Heartily and very humbly I acknowledge the help of all those who were kind enough to afford the invaluable guidance, suggestions and inspiration for making the completion of this thesis possible.

First and foremost I would like to express my profound and immense gratitude to Prof. R.C. Arora, MD, DSc, Head of Department of Medicine, M.I.B. Medical College, Jhansi, who always acted as a beacon of light to me through his inspiring guidance, invaluable suggestions and helpful advice at every step of this study.

I fail to find the proper words to express my sense of indebtedness from the deepest recess of my heart towards Prof. P.K. Jain, MD, MNAMS, Department of Medicine, M.I.B. Medical College, Jhansi, who provided me an opportunity to perform this work under his guidance. Immensely rich in his field of study and lowering presence in intellectual nature, he guided me at every point, with his invaluable suggestions, concrete guidance, constructive criticism and meticulous attention and prefused my brain with his unlimited knowledge. He had always been a source of encouragement, constant inspiration and the ultimate solution for my queries, and it is his highness that I literally found no hurdles on the way to the completion of this work. For his noble kindness, selfless generosity and
everlasting helping nature. I shall remain evergrateful to him.

It is an immense pleasure to present my deep regards towards Dr. Navneet Agrawal, MD (Medicine) Associate professor, Dr. Praveen Kumar, MD, DM, Associate professor (Cardiology), Dr. N.S. Senger DM (Nephrology) M.I.B. Medical College, Jhansi, for their most precious help, keen interest, invaluable suggestions and constant encouragement in moulding this work to a successful completion.

I am sincerely thankful to my friends and colleagues especially Dr. R.P. Singh, Dr. C.K. Talreja, Dr. Arun Sharma, Dr. Saurabh Goel, Dr. K.S. Prasanna, Dr. Pant and Dr. Abhay Gupta whose timely help and constant inspiration helped me tremendously in building up the infrastructure of this work.

I am very thankful to Mr. Vinod Kumar Raikwar for his immense sincerity in preparing the type script of this thesis.

Each and every cell of my body is highly indebted to my parents and my brothers. Their constant encouragement and heightened inspiration have been favourable culture media with adequate nutrients for me which helped me grow taller and take a shape to become identifiable.

I consider myself a lucky person to have the eversupporting and an understanding personality, my wife Dr. Simmi Agrawal (JR III, OBG, M.Y. Medical College, Indore) who always helped me to over come the stressful periods throughout the present work.
Above all, I can never afford to thank for the kind blessings and help of SAI BABA—the almighty. The beneficent, the merciful, who made me capable of fulfilling the present job.

I dedicate my work to all those innocent and loving persons who suffered from the dreaded complications of malaria and to all those patients who passed away from this mortal world, during the course of present study, helping me to materialize this project and serving the cause of humanity in their own capacity. I pray for the peace of the souls of those subjects who died during the study period.

Dedicating myself to my department, my discipline (Medicine) and my country (India).

Date: 23-2-2006
