Acknowledgement

First and foremost, I would like to thank my Guide and Mentor Dr. P. Venkatachalam, Professor, department of human genetics, SRU, who has been a pillar of support during my entire tenure as his PhD student. His constant encouragement, patient listening and critical review of my project are the reason that this thesis has been formulated. At any time, I was slacking at work or faced problems with experimental validation of hypothesis or writing articles for publication, Dr. P. Venkatachalam was always there to lift up my spirits, boost my confidence and ensured that I stayed focus in completing the tasks laid out for me.

As a fresher to the field ten years ago, Dr. Kalpana Gowrishankar, Senior consultant, Geneticist, Kanchi Kamakoti Childs Trust Hospital, has been instrumental in teaching me the importance of human genetics and my passion for the subject was instigated by her. I am really lucky to have been associated with her for more than a decade now and even today as my co-guide, she continues to inspire me and her scientific inputs has helped my thesis to shape up the way it is now.

When I was trying to develop a proposal for my PhD, I had the privilege of meeting Dr. B. R. Nammalwar, Director of Medical Education, Dr. Mehta’s Children’s hospital, who emphasized the need for more research especially in pediatric Nephrology and I am extremely grateful to him for his guidance, formulation of thesis hypothesis, patient selection and support as my RAC member. I could not complete this project without him.

I owe my heartfelt gratitude to Dr.Solomon FD Paul, Principal and Head, College of Biomedical science, SRU, who permitted me to conduct my research work in the human genetics department. He always had a solution for any problem I would take to him and his mere presence in the department was a confidence boost for me. Right from years as his student in the department and to the current day, he has always stood by me as a teacher and mentor. I am here today because of him.

My sincere gratitude to Dr.V.Vettriselvi, Associate professor, department of human genetics, SRU, especially her unconditional support, motivation and also in critical data
analysis to ensure that my results are accurately demonstrated in the thesis. She has been another pillar of support and I know that no matter what I would take up in my career, when I will turn and look back, there will be Dr. V. Vettriselvi giving me a nudge with the smile to proceed further.

I thank Dr. Teena Koshy, Ms. Priyanka and Ms. Shruthi Mohan my lab partners who were there for me in the lab whenever I needed their help. They were just a phone call away and together have stood by me from day one to help complete my work successfully.

I also thank department faculties of Department of Human Genetics, Biomedical Sciences, Biotechnology and Bioinformatics, especially Dr. K. Vijayalakshmi, Associate professor, department of human genetics, SRU, for her constant support.

While the thesis hypothesis was formulated with the help of eminent scientists and teachers in the department, the logistics and plan of action could not have been in place without the constant support, guidance and encouragement of the Management and authorities of SRU, especially Dr. S. P. Thyagarajan, Professor of Eminence & Dean (Research), SRU, who permitted me to utilize Central Research Facility when required. My special thanks to the management of V Clinbio labs for allowing me to pursue my dream and provide the necessary support towards completion of this thesis.

When a project involves collection of biological samples especially from that of children, I was quite apprehensive and worried as to how I could coordinate and collect them. However, Dr. Soundarajan, Head, department of nephrology, SRU, Dr. Praba Sengutavan, Head, department of nephrology, Dr. Mehta’s Children’s hospital, Dr. Vijayakumar, Dr. Sudha Ekambaram and Dr. Prahlad (team of senior nephrologists) permitted and helped me to collect the samples making it such a hassle free process.

My sincere gratitude to Dr. P. Venkatesan, Professor, Department of community medicine, SRU, who personifies the meaning of the word ‘teacher’, in spite of his busy schedule always had his doors opened for any student who wanted to learn analyze their results statistically to obtain meaningful data. I cannot believe that such an eminent professor like him would spend so much time with me, and was available at any time when help was needed and did so without any hesitation. I am forever indebted to him.
My special thanks to Dr. Malini, Senior scientists, V Clin Bio labs, SRU, for her kind support and as a person I could lean on for any help that was required towards my thesis.

I thank my colleagues and my friends Ms.Uma, Ms.Brindha, Ms.Soundaryam, Dr.Sharada, Dr.Seetha, Dr.Jeevan kumar, Dr.Anbarasi and Dr.Sangeetha who urged me to complete my PhD and whenever I felt like there was a road block, they would walk the way with me to cross the hurdle and help to accomplish the goal.

I thank all my colleagues from CRF Mr.Ravi, Mr.Balaji, Ms.Milan and Dr.Karthikeyan for their invaluable support.

Last but not the least, my mere existence is because of my lovable parents who have stood by me and inspired me to become the person I am. They have seen my highs and lows during my entire life and I cannot even think of any words that would justify my gratitude towards them. As the saying goes ‘Behind every successful man there is a woman, in my case the opposite hold true as my husband has been with me not just to complete my PhD, but for everything I do in day-to-day life. He has been extremely patient and has always helped me through tougher times with just a smile on his face. My Son, a piece of my heart that I let walk outside is one person whose mere presence motivates me to achieve and become something meaningful in life. I dedicate this thesis to all my family members for being who they are in my life.
