LIST OF TABLES

MATERIALS AND METHODS

TABLE 1: List of C. albicans strains used in this study.

TABLE 2: Lists of the primers used for PCR amplification of gene specific regions.

TABLE 3: Amount of internal standard used for the quantification of each PGL class.

TABLE 4: Conditions of spectra revealing a set of lipid species containing a common head group fragment.

Section I

TABLE 5: Steady state fluorescence polarization measurements (p value) in C. albicans WT and morphological mutants in the absence (control) and presence of 150 μM BPS.

Section II

TABLE 6: Determination of dose ranging inhibition by broth microdilution assay of Δefg1 mutants.

TABLE 7: Relative percentages of fatty acids WT and Δefg1 mutant.

SECTION III

TABLE 8: Genes differentially regulated in response to iron deprivation.

SUPPLEMENTARY DATA

Supplementary Table: (S1) Genes up regulated in response to iron deprivation.
Supplementary Table: (S2) Genes down regulated in response to iron deprivation.
Supplementary Table: (S3) PGL compositions in response to iron deprivation.
Supplementary Table: (S4) SL compositions in response to iron deprivation.
Supplementary Table: (S5) SE compositions in response to iron deprivation.
Supplementary Table: (S6) DAG compositions in response to iron deprivation.
Supplementary Table: (S7) TAG compositions in response to iron deprivation.
