Acknowledgements

It gives me great pleasure to sincerely acknowledge the help and cooperation I have received from my family, teachers and friends to realize my dream. Firstly, I take this opportunity to express my deep sense of gratitude and respect to my research guide Dr. J. R. Tonannavar, for providing me an opportunity to work under his enlightened guidance. To work under his guidance has been a source of inspiration for higher knowledge. I am also thankful to him, for his constant guidance, patience and untiring encouragement in the course of this work. I am thankful to him for reading all the Chapters patiently and for his valuable suggestions to improve the text of the thesis. It is a pleasure to express my indebtedness and gratitude to madam, Dr. J. V. Yenagi for her kind encouragement, sustained interest, able guidance and affection that I received from her throughout my tenure as a research student. Special thanks to her for valuable and critical advice in arranging the draft of chapters. I humbly thank both when they were available in times of need, especially during the last five months and boosting my confidence when it was on the verge of collapse.

I thank Dr. M. V. Kulkarni, our collaborator, Dept. of Chemistry, for the synthesis of the all substituted 4-bromomethylcoumarins, whose study has underlined the motivations for the thesis. I am grateful to him for constantly available for advice. I am greatly indebted to Professor B.G.Mulimani, Vice-Chancellor, Gulburga University, for his unwavering support and encouragement during the course of my work. His special efforts, while he was
Programme Coordinator for the COSIST, in getting Gaussian software package to the Group is gratefully acknowledged. I am greatly indebted to Dr. S. Umapathy, Dept of Inorganic and Physical Chemistry, Indian Institute of Science, Bangalore, for encouraging me by allowing to work with and learn the techniques of electronic structure calculations in his lab and arranging for Raman spectral measurements for 6-Methyl-4-bromomethylcoumarin. I thank him and his students for their help and cooperation which they generously offered when ever I visited the lab.

I thank Professor B. Hanumaih, Director, USIC, KUD for allowing me to use the needed facilities. I thank Professor A.M Karguppikar, former Chairman, and Professor S. S. Kubkaddi, present Chairman, Department of Physics, for their help and constant support. I thank Dr. J. S. Bhat for providing the computing facility at the Computer Lab. Timely help from Professor. Tom Sundius, Department of Physical sciences, University of Helsinki, Finland in running the MOLVIB package during the initial period is gratefully acknowledged. I also thank Dr. Sharat Ananthmurthy, Department of Physics, Bangalore University, for his encouraging role in the enhancement of Studentship. I sincerely thank Professor N. S. Sankeshwar for his encouragement in starting my research work. I thank my teachers who helped me directly or indirectly during my student career. The award of Research Studentship by Karnataka University is gratefully acknowledged.

I take this opportunity to thank, Mrs. Lalitha, at SAIF, IIT Madras for Raman spectral measurements. I thank Mr. I. H. Kadlimatti, USIC, Karnataka
University, Dharwad, for the IR spectral measurements. I thank the library staff at the S.S.Basavanal Library and Dept of Chemistry for their help during these four years.

I thank my Chemistry friend, Mr. Jadav, for valuable discussions we had and also for providing me with many required references. I owe a special debt to my friend Miss Anuradha, for her affectionately sustained and varied help during these four years. I thank my friend Ms Reshma for her splendid cooperation and who stood by me in my joy and sorrow during the last phase of my Ph. D. career. I thank Mrs. K. R. Usharani, my graduate teacher for her constant encouragement. I sincerely thank my teacher and present Research Associate Mrs. P. Sushanti for her valuable suggestions during the preparation of the thesis and for assistance in checking the manuscript. For their unreserved help and affection, I thank my Group Associates, Mr. S. B. Doddamani, Mr. C. S. Hiremath, Mrs. N. V. Aralikatti. I wish to express my appreciation to all the members of the nonteaching staff (especially Mr. Manjunath Shiri) and fellow Ph. Ds who helped me directly or indirectly during the course of this work.

Finally, I would like to acknowledge the constant support and encouragement from my family. I am thankful to my father for being unfailing source of inspiration and for supporting me in all the walks of my life. On this occasion, I remember my dearest mother, who has been the source of my strength. I thank my brother Anand; sisters, Mamata and Mangala; and their families who have felt my absence in all these days on several occasions and
without their patience and understanding this thesis would not have been possible.
