LIST OF TABLES
Table 1. Diagnostic value differentiating diabetes mellitus from impaired glucose tolerance

Table 2. Potential adverse events of exercise in patients with diabetes

Table 3. Absolute and relative contraindications to exercise

Table 4. Major components of pre-exercise medical history

Table 5. Major components of pre-exercise physical examination

Table 6. Recommendations to avoid exercise-induced complications

Table 7. Characteristics of insulin preparations and action

Table 8. Approved daily dosages of oral medications

Table 9. Target glycaemic control for diabetic patients

Table 10. Common laboratory values in DKA and HHNKS

Table 11. Summary of measures and their categorizations

Table 12. Demographic parameters

Table 13. Diabetes history

Table 14A. Analysis of responses to questions investigating knowledge regarding nature of diabetes and its complications in control group
Table 14 B. Analysis of responses to questions investigating knowledge about nature of diabetes and its complications in intervention group

Table 15 A. Analysis of responses to questions investigating knowledge regarding self-monitoring of blood glucose in control group

Table 15 B. Analysis of responses to questions investigating knowledge regarding self-monitoring of blood glucose in intervention group

Table 16 A. Analysis of responses to questions investigating knowledge regarding drugs in control group

Table 16 B. Analysis of responses to questions investigating knowledge regarding drugs in intervention group

Table 17 B. Analysis of responses to questions investigating knowledge regarding diet in control group

Table 17 B. Analysis of responses to questions investigating knowledge regarding diet in intervention group

Table 18 A. Analysis of responses to questions investigating knowledge regarding exercise in control group
Table 18 B. Analysis of responses to questions investigating knowledge regarding exercise in intervention group

Table 19 A. Analysis of responses to questions investigating knowledge regarding self-care in control group

Table 19 B. Analysis of responses to questions investigating knowledge regarding self-care in intervention group

Table 20. Diabetes knowledge in intervention and control groups pre and post diabetes education by age

Table 21. Diabetes knowledge in intervention and control groups pre and post diabetes education by sex

Table 22. Diabetes knowledge in intervention and control groups pre and post diabetes education by marital status

Table 23. Diabetes knowledge in intervention and control groups pre and post diabetes education by level of education

Table 24. Diabetes knowledge in intervention and control groups pre and post diabetes education by occupation

Table 25. Diabetes knowledge in intervention and control groups pre and post diabetes education by family incomes/month
Table 26. Diabetes knowledge in intervention and control groups pre and post diabetes education by duration of diabetes

Table 27. Diabetes knowledge in intervention and control groups pre and post diabetes education by visit frequency

Table 28. Diabetes knowledge in intervention and control groups pre and post diabetes education by type of treatment

Table 29. Diabetes knowledge in intervention and control groups pre and post diabetes education by family history
