ACKNOWLEDGEMENTS

Over the years it has been my good fortune to encounter many people who have given me more of their time, companionship, professional and personal help, and above all: patience than was perhaps warranted by my seeming determination to indefinitely position the deadline for finishing this thesis at “next year”!!

I would, first of all, thank my research supervisor, Prof. R. L. Deopurkar. He not only gave me the scientific support and supervision that a doctoral student can expect from his professor, but he also allowed and encouraged me to remain part of the Department of Microbiology, University of Pune. His ideas, his research, and especially his unique brand of enthusiasm, analytical skills and constructive criticism form the bedrock on which much of this thesis was built. Thanks to him, I have never been without a desk, a computer, a friendly ear, and the job at the University without those, I would never have made it this far.

My special thanks to Prof. B.P. Kapadnis and Prof. B.A. Chopade from Microbiology Department, for their kind co-operation and extending their help during the tenure of the research work.

I acknowledge the help of Dr. Kshirsagar, Managing Director, Katraj Dairy Farm Ltd. Pune, who generously provided whey.

I specifically owe my best regards and heartfelt gratitude to Dr. M.V.N. Shirodkar, erstwhile Director Haffkine Institute and Dr. Chetan Ponkshe, Sathey College, Mumbai. Both of them were instrumental to boost my morale and gave unconditional support, especially in critical times.

There are three fellow researchers whom I would specifically thank for the support they gave me over the years: Mr. Amol Raut for his omnipresence, ever-enthusiasm and help (both at professional and personal front); Mr. S. J. Sathe, and Mr. Kedar Ahire for their uncanny guidance, assistance, and constant encouragement.
A list that has far too many names on it to mention separately is that of all the co-workers, group members, and roommates with whom I have worked, talked, and lunched with over the years. My gratitude goes to all these colleagues at the Department of Microbiology, University of Pune.

Moving towards more personal acknowledgements, I would like to execute the aggregated thanks towards all my family and friends with a special shout-out to Mr. Prashant Kulkarni, Mr. Jaideep Chandorkar, Ms. Amruta Barhanpurkar, Mr. Pankaj Aher and Ms. Arti Patil — for their assistance, friendship, moral support and patience, and for the fact that they never gave into the temptation to make fun of my perennial thesis delays and woes. Well,—hardly ever.

I am, of course, particularly indebted to my parents and my brother Amit for their monumental, unwavering support and encouragement on all fronts. They have truly always been there for me, and without them none of this would have been even remotely possible.

Pune
