I take this opportunity to express my sincere gratitude to my supervisor Prof. M.K. Premi for his sustained guidance, invaluable help and constant encouragement in completing the present research work. In spite of his extremely busy schedule during the entire period of this study he always spared time to know the progress of my work and checked the drafts, in addition to giving me his suggestions and comments. I, indeed, owe immense debt to him, for right from M.A., M. Phil. to Ph.D. programme he not only initiated my interest in population studies but also continuously encouraged me in the pursuance of my learning in this field.

I am very grateful to Prof. Amitabh Kundu and Dr. Aslam Mahmood of the Centre for the Study of Regional Development, J.N.U., who kindly gave me their valuable time on discussing various important aspects of my work and advised on the statistical treatment of the data which has helped me a lot in the furtherance of the study.

I deeply acknowledge the University Grants Commission for providing me a Junior/Senior Research Fellowship through National Entrance Test (NET) which facilitated me in carrying
out this study. Besides, I am thankful to the Western Regional Centre of the Indian Council of Social Science Research for providing me a Study Grant to visit libraries and institutes in Bombay.

I am very thankful to some distinguished institutions and scholars whose generous supply of most valuable supportive materials were of great help to me in the successful completion of this study. Among the institutions, Indian Association for the Study of Population arranged to provide me 1991 Census provisional results which have been suitably incorporated in this work to make it up-to-date. Besides, Department of Economic and Social Affairs (United Nations, New York) and Economic and Social Commission for Asia and the Pacific (Bangkok) and World Health Organization (Geneva) are other institutions whose very important documents were of great benefit to me.

Among the distinguished scholars, I am particularly obliged to Mr. Alain Marcoux (Food and Agriculture Organization of the United Nations, Rome), Dr. Jitendra Khanna (World Health Organization, Geneva) and Dr. Moni Nag (Population Council, New York) who, on my request, sent their articles and reference materials.
Thanks are also due to the librarians and the staff of the Jawaharlal Nehru University Library, Registrar General's Library, National Institute of Health and Family Welfare Library - all in New Delhi; Jawaharlal Nehru Library, Bombay University; International Institute for Population Sciences Library and Family Planning Association of India Library - all in Bombay, who provided me access to consult books and other reference materials available there.

I also availed the excellent computational facilities available at the Computer Centre, School of Social Sciences, JNU and highly appreciate the timely data processing done by Mr. Satyendra Kumar and his assistant Ms. Shish Kaur. Mr. Kumar also helped me in computerized typing of this thesis and did the painstaking job of giving the final typed shape to the material. I am thankful to both of them for their help.

There is a long list of my well wishers and friends who extended their cooperation in more than one way in completion of this study. I would especially like to offer my thanks to Mrs. Sanghamitra Acharya and Shravan Acharya, Sudarshan Sahoo, Akshaya, Izhar, Laqua, Mujahid, Nafsia, Sameer and Shahnaz. This work would not have seen the light of the day without active involvement of the members of my family. My
father Dr. S.H. Ahmad has been very keenly interested in this study and also gave me suggestions which were great use. His persistent queries regarding the progress of my work made me more accountable and motivated. My elder brother Dr. S.S. Ahmad and my sisters extended their unfailing and much desired moral support and kept me free from homely obligations while this work was in its last stage. My mother made it a point to see that I completed this work with full dedication and sincerity. She has all along been my greatest source of inspiration and strength. This thesis is humbly dedicated to her.

Needless to add, for any possible omission or commission I am alone responsible.

Syed Sami Ahmad
