Acknowledgement

This thesis arose in part out of years of research that has been done since I came to Malaria Group at ICGEB. By this time, I have worked with a great number of people whose contribution in assorted ways to the research and the making of the thesis deserve special mention. It is a pleasure to convey my gratitude to them all in my humble acknowledgment.

Foremost, I would like to express profound gratitude to Prof. V.S.Chauhan, for his supervision, advice, and guidance throughout this research work. I am deeply indebted to him for his unflinching encouragement and moral support that enabled me to complete my work successfully. I am very grateful for his patience, motivation, enthusiasm and immense knowledge that, taken together, make him a great mentor.

I especially want to thank Dr. Astf Mohmmed for his truly scientist intuition, which exceptionally inspire and enrich my growth as a student, a researcher and a scientist want to be. I am indebted to him in more ways than I can mention. To conclude his contribution towards my present understanding of science, I would like to quote what Abraham Lincoln once said, “Give me six hours to chop down a tree and I will spend the first four sharpening the axe”.

I would like to express my deep regards and gratitude to Dr. Pawan Malhotra for his unconditional help and making me feel very much a part of his own group.

Special thanks to Dr. Shams Yazdani for his valuable guidance and trouble-shooting tips in the bleakest of times, when I was tired of E.coli.

Many thanks go in particular to Dr. Paushali Mukherjee for helping me at various stages of my work, with her valuable reagents.

I am especially grateful to Dr. Manjula Kalia for introducing me to the world of Confocal Microscopy. Her patience and unconditional help made me steer through the toughest time of my Ph.D. The help rendered by Abdul during long Confocal sessions is duly acknowledged.

I am grateful for the cooperation of all past and present members of Malaria Lab for congenial atmosphere in the lab and bearing with me throughout these years. New kids in the block: Shweta, Manvi, Inayat, Dipto, Asad, Shefali, Shivani and Monica, deserve special mention, as without them the last phase of my Ph.D. would never have been that smooth and cheerful. Special thanks to Sumit for his valuable suggestions throughout the writing of this thesis and to Puneet for provision of reagents and all those “masala” gossips.

I am extremely thankful to CSIR for giving me the sole reason to be happy about during the most frustrated times when I cursed myself for choosing this career.

I would like to thank animal house staff members Dr. Chandramouli, Ashok, and Rakesh for their efforts and helping me in handling mice. God please forgive me for sacrificing the life of those animal souls.

I am grateful to the administrative, technical and the library staff members for their concern and support they provided during all these years at ICGEB.

Where would I be without my family and friends.............

Meha: thanks for your support, guidance and care that had pulled me up even from the deepest of graves. I don’t even know how to put in my feelings in words and express how does it feels, to have you as a friend.
Prashant and Krish: thanks for listening to all my non-sense and bearing with it throughout these years. Thanks for all those fun-filled moments and those memorable trips. I will cherish our bond throughout the life ahead. Special thanks to Krish for his critical comments and corrections in this thesis. It was not possible to have completed my thesis without his momentous efforts and selfless help.

Shashank: thanks for the genuine bond of friendship which makes me feel confident with each passing day.

Viren: thanks for sharing fears and making me realize that all of us belong to same niche.

Sumona and Aseem: thanks for all those advices and the incessant moral support. Your help with crucial reagents is deeply acknowledged.

Namita: thanks for listening to me during my good and bad times, and providing inner strength.

Alam, Hafiz and Kalyan: thanks for bearing with my toughness and spreading my fear all around.

Grace: thanks for sharing the tough time with Confocal and for the moral support that “this too shall pass”.

Subhasish: thanks for being so kind and for your help with phospo-imager and crucial reagents.

Mridul Kalita: I can only admire him. NO words of gratitude can ever express how I feel about him. He is one of the most genuine human being I have ever come across. His lessons laid the firm foundation for my further research.

Shaheena: thanks for being such a warm person, a sweet room-mate and for helping me with HPLC.

Sincere thanks to Rachna for provision of crucial reagents throughout my Ph.D. Apart from this I owe to her the long, scientific and non-scientific discussions which made me grow stronger as a person.

I am as ever, especially indebted to my parents, for their love and support throughout my life. Their understanding and confidence has made me believe in myself and pursue my dreams. I want to thank my sister Charu for her emotional support, love and understanding and for being such a caring sibling. I would like to thank my mausaji and mausiji for their inseparable support and prayers that have made the path of this journey a lot more comfortable than it would have been otherwise. Special thanks to my kiddo cousins, Vishal and Shubham, for their love, confidence and prayers that kept me going on.

I am extraordinarily fortunate to have friends like Inder, Rakhi and Jatin: thanks for being there for everything in my life. I can simply say “tum ho tou hum hain”.

Words fail me to express my appreciation to my husband Harender whose warmth, dedication, love and persistent confidence in me, has taken the load off my shoulder. I owe him for magnanimously sharing his intelligence, passions, and ambitions, and all the more for making me understand that why it is most necessary to be a good human being first. I will always be indebted.

Finally, I would like to thank everybody who was important to the successful realization of thesis, as well as expressing my apology that I could not mention personally one by one.

Deepti Gangwar
