ACKNOWLEDGEMENT

First and foremost who deserves to be mentioned is my respected teacher Dr. B.B. Mukherjee for his invaluable guidance to develop the ideas expressed in this thesis and for constant suggestions at every phase of my work.

I am also greatly indebted to Dr. S. Gupta of Botany Department whose kind suggestions and help at various level of this work led me a great way to continue this work. My deepest regard and respect is to the Acting Director, Professor S.K. Sen for his encouragement in some critical moments of my research and for some administrative support and also for providing me with all necessary facilities to work in this Institute.

I shall ever remember my fellow colleagues specially Sm. Sujata Saha, Yumnum Sunitibala Devi, Aditi Chatterjee and Sri Biswajit Bera for their cooperation and sympathy althrough.

Above all, I must mention that the indomitable spirit that pilotted me through these long years against many odds emanated constantly from my beloved father whose affectionate inspirations were the guiding force of my research work.

Last but not the least to mention is the main spring of my moral support that I received from my husband, Dr. Sumantra Das a friend,
philosopher and guide. His ungrudging sharing of most depressing moments by extending real succour could enable me to complete my work successfully.

I can not forget a contribution of my younger brother Sri Goutam Mondal who was ever ready to help me with his small hands for any job whenever called for.

Lastly, I like to mention my nearest and dearest one, Master Suddhasattwa Das who missed his motherly care for too many hours of the day without causing much problem to me or to anybody else.

Sri Sukumar Majumdar typed the manuscript with utter sincerity and in a very short time. My thanks are due to him. All line drawings were made by Sri Asutosh Sarkar. The financial assistance was received from the Dept. of Science and Technology, Govt. of West Bengal.
