Acknowledgement

The work embodied in this thesis entitled 'Studies on some aspects of the enzymology of UDP-glucose 4-epimerase from \textit{Saccharomyces fragilis}' being submitted for the degree of Doctor of Philosophy (Science) of Calcutta University.

It is a very tough task for me to express my feelings of great indebtedness to so many peoples I have come across during this work in such a limited space. The first name to mention, whom I owe most, is my scientific preceptor, Dr. Amar Nath Bhaduri, Professor of the Department of Pharmacy, Jadavpur University, Calcutta. I learned a lot of things from him, too long to be listed. I came in the laboratory as a fresher, young, enthusiastic yet neither matured nor complete, unacquainted with the horizon of Science and life. He taught me how to venture incoming problems of science with patience, how to cut inside the problems to the deepest level, how to look into these in a rational way without being biased and to keep the mind always open for any idea. Not only these but there are bonuses. I learned from him how to cooperate with the fellowmen, the togetherness, the openness to listen to others view keeping own point clear, in short, the scientific as well as human excellence.

The laboratory where we work for years is like our second home having all the colleagues like a family who
shares each other's moments of stimulation and depressions inevitable in a research life. Their constant encouragement and cooperation helped me to level the many depressive troughs of research and provided me the courage necessary to overcome all the bottlenecks. Manjudi (Dr. Manju Ray), our seniormost colleague, with her most experienced hand and strong but soft mind always took care of me like my elder sister whenever I faced a tough situation. She taught me how to stick to a problem sincerely and firmly. She made me acquainted with many techniques of enzymology. Namitadi (Dr. Namita Surolia, at present in IISc, Bangalore), soft and considerate, encouraged me always. Kuntaladi (Dr. Kuntala Shome), a sweet coworker social, friendly, always kept the harmony in the whole group. The valuable collaboration I have had with Dr. Ajoy Kumar Samanta (At present Scientist, IICB, Calcutta) in the early stages of my research work have been of great benefit to me for learning the theoretical as well as practical aspects of my research problem. Nandita (Nandita Raut), a clean member of our group, always provided the example of cleanliness. Soft spoken but firm, she sometimes took me to look at the other side of life. Samir (Samir Kumar Dutta), sincere, generous, humorous, highly cooperative, energetic with strong hands always ready to handle and take care of all of our technical problems, very much fond of reading, always booming with ideas; the valuable collaboration I have had with him in some of my work will always be pleasant to remember. Tanmoy (Tanmoy Bera), full of self confidence presented many memorable, enjoyable
moments. Sibaji (Sibaji Sircar), a lively boy full of confidence always tried to provide deep insight to various aspects of research life. Tanmoy (Tanmoy Mukherji), soft, self composed, balanced and cultured was very cooperative.

In this opportunity I wish to record here my thanks to my friend Miss Mary Ghosh for her valuable help and encouragement in many adverse situations.

I feel very much obliged to mention the kind cooperation of Dr. B.K. Bachhwat, Director, Indian Institute of Chemical Biology for providing me necessary library and Instrumental facilities.

I am grateful to Prof. M. Chowdhury for kindly allowing me to perform fluorimetric studies in his laboratory and also to Shamita Basu of the same laboratory and Chitra Ganguly of RSIC, Calcutta for their kind cooperation during my work.

I do express my heartfelt thanks to Dr. Subhankar Ray, Research Associate of the Department of Biochemistry, Calcutta University for his kind assistance.

I am also grateful to all the members of our department for their kind help in many ways.

I am grateful to Mr. Prabhas Ghosh for his kind cooperation in drawing the figures.

I also extend my thanks to Mr. K. Chakraborty for the speed and accuracy with which the thesis is typed.
Last but not the least, I would like to express my deep appreciation to my family, who, patiently endured all the troubles created to them and inspired me always. In this connection, I must express my sincere gratitude to my maternal uncle Dr. B.C. Pathak of Department of Chemical Technology, Calcutta University for his valuable advice and encouragement at the times when it was most needed.
