Research on Public Transport interested me since my first exposure into this field about ten years ago, while I was assigned a research project on Calcutta, sponsored by the Transport and Road Research Laboratory, U.K. I am indebted to the most wonderful man of Warwick, who led me to this field from a background of an electrical engineer. This work is the result of my love and emotion towards the public transport of developing countries. The research took more than five years as data collection was found to be a much harder task than it was thought before. Thanks to the Government of West Bengal, Department of Transport, who showed much interest in the research. The Calcutta State Transport Corporation, The Calcutta Tramways Company Limited, The Bengal Bus Syndicate, The Calcutta Metro Railways, Eastern Railways and many other related organisations extended their friendly hands to the study. I am grateful to Professor R. Dutta, Ex. Head of the Deptt. Economics, Calcutta University for his kind supervision on the research. I am also thankful to Professor D.N. Bhattacharya for his kind assistance and help in the study. I am thankful to the Indian Institute of Social Welfare and Business Management, Calcutta for providing me financial assistance for the research work. Finally I must thank Mr. P.K. Roy and Mr. J. Bhattacharya who helped me in collecting data from various sources and took active parts in surveys and interviews. The Regional Computer Centre, Jadavpur University was kind enough to let me use the Burroughs 6700 Machine for most of the computing work. The IBM PC of the IISWBM was used also for solutions of Spread Sheet Models.
