

## Acknowledgement

The author acknowledges with many thanks the encouraging comments offered on the work by Dr. K. N. Bagchi, Ex-Principal and Professor of Chemistry, National Medical College, Calcutta and Dr. R. N. Chakravarty, Professor of Chemistry, School of Tropical Medicine, Calcutta.

The author is heavily indebted, indirectly, to the legal profession: during cross-examination in judicial enquiry into drunkenness cases, he (as expert witness) was oftentimes cross-examined on points 'what practical precautions did you adopt in blood alcohol test program to prevent error? were your laboratory air and reagents free from vitiating factors? what tests did you perform to ascertain purity of these sources?' Perplexing but vital questions as they were inspired the author to undertake this original work.

The author is grateful to Professor Dr. Denys Monnier, Microchemistry Division of the University of Geneva, Dr. S. R. Moitra, Professor of Physiology, Calcutta University and Dr. A. K. Maiti, Department of Physiology, College of Medicine, University of Calcutta for their high appreciation of the work.

Keen interest shown in the work as communicated by Dr. G. Griffaton of the INSTITUT NATIONAL de la SANTE et de la RECHERCHE MEDICALE, Paris, FRANCE, and by Mr. T. Shinohara, Research Bio-chemist of the NATIONAL RESEARCH INSTITUTE OF POLICE SCIENCE, Tokyo, Japan, has been noted with thanks.
