List of figures

1.1 Types of Board Games 8
1.2 Game tree for Tic-Tac-Toe 13
1.3 Taxonomy of global optimization algorithms 16
1.4 Go-Moku 15*15 board 19
1.5 Othello initial board 20
2.1 Initial position of Awari 31
3.1 Basic hill-climbing search 51
3.2 Non monotonic fitness landscape 52
3.3 Random fitness landscape 52
3.4 Non monotonic fitness and solution using momentum 53
3.5 Multiple trials in hill climbing for initial value 53
3.6 Basic cycle of evolutionary algorithm 57
3.7 Configuration parameters of evolutionary algorithm 58
3.8 Genetic Programming in the context input-processing-output model 61
3.9 A simple 2-ply game tree with tree-width = 2 63
3.10 αβ pruning on simple 2-ply game tree with tree-width = 2 65
3.11 Basic cycle of genetic algorithm 70
3.12 Basic selection process in GA 74
3.13 Single point crossover 77
3.14 Two point crossover 77
3.15 Uniform crossover 78
3.16 Three parent crossover 79
3.17 Ordered crossover 79
3.18 Flipping of bits 80
3.19 Interchange of bits 80
3.20 Reversing of bits 81
4.5 Max fitness for population 1000
4.6 Genetic algorithm player time (Population 500)
4.7 Genetic algorithm player time (Population 800)
4.8 Genetic algorithm player time (Population 1000)
4.9 Average time for a move
4.10 Result analysis (Population 500)
4.11 Result analysis (Population 500) Computer player first
4.12 Result analysis (Population 500) Human player first
4.13 Result analysis (Population 800)
4.14 Result analysis (Population 800) Computer player first
4.15 Result analysis (Population 800) Human player first
4.16 Result analysis (Population 1000)
4.17 Result analysis (Population 1000) Computer player first
4.18 Result analysis (Population 1000) Human player first
4.19 Result analysis for different size of population
4.20 Othello Program – Fitness Analysis (Generation 1 to 100)
4.21 Weight changes in corner discs
4.22 Weight changes in discs adjacent to corner discs
4.23 Othello Average and Peak fitness value
4.24 One game generations’ minimum and maximum fitness values
