

Acknowledgement

This thesis would not have been possible without the support of many people. It is a great pleasure to convey my gratitude to all of them in my humble acknowledgements.

In the first place, I would like to express my profound gratitude and deep respect to Prof. Samita Basu, my research supervisor, for her constant encouragement, stimulating suggestions and kind guidance. I am very much thankful to her for introducing me to this beautiful area of research, and allowing me to have extraordinary experiences throughout my research work.

I would like to acknowledge Council of Scientific and Industrial Research (CSIR) for offering research fellowship [File No: 09/489(0064)/2009-EMR-I]. I am very much grateful to the present and former directors of Saha Institute of Nuclear Physics for providing the required infrastructure and facilities.

My work wouldn't be completed without funding from CSIR and projects viz., Chemical and Biophysical Approaches for Understanding of Natural Processes (CBAUNP) [Grant no. 11-R&D-SIN-5.03-0100] and Molecular Mechanism of Diseases, Drug Action (MMDDA) [Grant no. 11-R&D-SIN-5.04] and Bimolecular Assembly, Recognition and Dynamics (BARD) [(Grant no. 12-R&D-SIN-5.04-0103] project of Saha Institute of Nuclear Physics, Department of Atomic Energy, Government of India.

I am thankful to the present and former Heads of Chemical Sciences Division, Saha Institute of Nuclear Physics for helping me whenever I needed. I am sincerely grateful to Prof. Soumen Basak, Prof. Maitreyee Nandy, Prof. Munna Sarkar, Prof. Amitabha De, Prof. Padmaja Prasad Mishra, Prof. Montu K. Hazra, Prof. Dulal Senapati and other distinguished faculty members of Saha Institute of Nuclear Physics for their encouragement.

I wish to express my sincere thanks to all the non-academic staff members of Chemical Sciences Division and also to the members of the library and workshop for their much-needed, cheerful and timely assistance.

I am grateful to Prof. Chandan Saha, School of Tropical Medicine, Kolkata, for allowing me to work on the fluorescent 1-Keto-1,2,3,4-tetrahydrocabazole derivatives synthesized in his laboratory.

I wish to express my heartfelt gratitude to my coworkers Amrit Krishna Mitra, Subhanip Biswas, Mousumi Mondal and others for their wonderful cooperation. They have sincerely shared the workloads during the research period.

This acknowledgement will be incomplete without the mention of the loving support, cooperation and cheer I received from my friends in Saha Institute of Nuclear Physics throughout my research tenure. In this regard, a special thanks goes to Manas da, Mousumi di, Sreeja di, Binita di, Swadesh da, Ajoy da, Ankan, Kallol, Anupa, Subhas, Banabithi, Piyali, Chaitrali, Nidhi, Sathi, Sourav, Tapas, Abhishek, Sudeshna and Maireyee.

I am deeply indebted to my mother for inspiring me from the very onset of this long journey. This work would not have been possible without her constant encouragement and support. Finally, I would like to thank my loving wife Moupriya for being supportive and bearing me a lot during my entire research period.

However, there are many people who have helped me in various ways but whose names I have missed out. They know who they are, and I hope they will accept my sincere thanks for all that they did.

Sujay Ghosh
