

Contents

Glossary of Acronyms	i
Thesis Layout	Iii
Chapter 1: Introduction	1
1.1. History of spectroscopy	1
1.2. Classifications of molecular spectroscopy	3
1.3. Applications of electronic spectroscopy	4
Chapter 2: Scope of the Thesis	7
Chapter 3: Conceptual foundations	12
3.1. Photophysical pathways of electronic energy dissipation	12
3.1.1. Unimolecular processes of energy dissipation	12
3.1.2. Bimolecular processes of energy dissipation	15
3.2. Characteristics of fluorescence emission	16
3.2.1. Mirror image relationship	16
3.2.2. Stokes shift	17
3.2.3. Kasha's rule	17
3.2.4. Fluorescence quantum yield	17
3.2.5. Fluorescence lifetime	18
3.2.6. Steady-state and time-resolved fluorescence measurements	19
3.2.7. Inner filter effects	19
3.2.8. Calculations of quantum yield	20
3.2.9. Fluorophores – intrinsic and extrinsic probes	21
3.3 Effects on fluorescence emission	22
3.3.1. Structural effects on fluorescence emission	22
3.3.2. Effect of solvent nature on fluorophore emission - the classical approach	23
3.3.3. Empirical Parameters of Solvent Polarity	26
3.3.4. Z parameter of solvent polarity	27
3.3.5. $E_T(30)$ parameter of solvent polarity	28
3.3.6. Multiparameter approaches to solvent polarity	30
3.3.7. Effect of temperature and viscosity on fluorescence spectra	33
3.3.8. Fluorescence in mixed solvent systems and preferential solvation	34
3.4. Fluorescence quenching	36
3.5. Excitation energy transfer	38
3.6. Photoinduced electron transfer	41
3.7. Photoinduced proton transfer	43
3.8. Fluorescence polarization spectroscopy	43
3.9. Red-edge-excitation fluorescence spectroscopy	45

3.10. Synchronous fluorescence spectroscopy	45
3.11. Time-correlated single-photon counting	47
3.12. Ligand binding studies from fluorescence	48
3.13. Circular dichroism spectroscopy	49
3.14. Theoretical molecular docking calculations	51
Chapter 4: Materials and techniques used	52
4.1. Materials	52
4.2. Instrumental techniques	52
4.2.1. UV- visible absorption Spectroscopy	53
4.2.2. Steady-state Fluorescence Spectroscopy	53
4.2.3. Circular dichroism spectroscopy	53
4.2.4. Fluorescence decay measurements	54
4.2.5. Transient absorption spectroscopy	55
4.3. Softwares	57
4.3.1. DichroWeb	57
4.3.2. Avogadro	57
4.3.3. AutoDock4	58
4.3.4. OriginPro 8.5	58
4.3.5. ChemBioDraw Ultra 12.0	58
4.3.6. LigPlot+	58
Chapter 5: Investigation of emission of the fluorophores in various solvents	59
5.1. Characteristics of fluorescence emission of 1-keto-1,2,3,4-tetrahydrocarbazole derivatives in solution phase	60
5.1.1. Absorption and emission spectra of KTHC-derivatives in pure solvents	60
5.1.2. Absorption and emission behaviour of KTHC-derivatives in mixed solvent systems	65
5.1.3. Fluorescence decay of KTHC-derivatives in pure solvents	67
5.1.4. Analysis of the solvatochromic behaviour of KTHC-derivatives: dipole moment change calculation	72
5.1.5. Analysis of the solvatochromic behaviour of KTHC-derivatives: empirical polarity parameter ET(30)	76
5.1.6. Analysis of the solvatochromic behaviour of KTHC-derivatives: Kamlet-Taft solvatochromic comparison method	78
5.1.7. Analysis of the solvatochromic behaviour of KTHC-derivatives: Catalan's multiparameter method	80
5.1.8. Excited state H-bonding in toluene-acetonitrile and toluene-methanol mixed solvent systems	80
5.2. Spectroscopy of 1,8-naphthalic anhydride in aprotic solvents	83
5.2.1. Absorption and fluorescence spectra of 1,8-naphthalic	83

anhydride	
5.2.2. Fluorescence decay of NAN in various aprotic solvents	84
5.2.3. Abnormal fluorescence of NAN in DMSO and DMF	85
Chapter 6: Spectroscopy as a tool to study the interaction of fluorophores with small molecules	87
6.1. Spectroscopic investigation of the interaction of KTHC-derivatives with aromatic amines	87
6.1.1. Fluorescence quenching of KTHC-derivatives in presence of aromatic amines	87
6.1.2. Transient absorption of KTHC-derivatives in presence of aromatic amines.	92
6.1.3. Theoretical validation of PET reactions.	94
6.2. Exploration of the excited state interaction of NAN with aliphatic amines using spectroscopic tools	95
6.2.1. Aliphatic amines quench NAN fluorescence and reduce the fluorescence lifetime	95
6.2.2. Transient absorption of NAN in presence of aliphatic amines	106
6.3. The abnormally low fluorescence of NAN in DMSO and DMF	108
Chapter 7: Study of the interaction of fluorophores with biological macromolecules using spectroscopy	112
7.1. Interactions of KTHC-derivatives KTHC-67 and MOTHCA with β -cyclodextrin	112
7.1.1. Spectral modification of KTHC-derivatives in presence of β -cyclodextrin	112
7.1.2. Local polarities of the binding sites of KTHC-67 and MOTHCA in β -CD	115
7.1.3. Quantification of the binding interaction of KTHC-derivatives with β -CD	116
7.1.4. Molecular docking calculations for the binding of KTHC-67 and MOTHCA with β -CD	116
7.2. Interactions of 1,1'-bi-2-naphthol enantiomers with human serum albumin	117
7.2.1. Changes in the absorption spectra due to the interaction of BINOL enantiomers with HSA	117
7.2.2. Changes in the fluorescence spectra and lifetime due to the interaction of BINOL enantiomers with HSA	119
7.2.3. Changes in the synchronous fluorescence spectra due to the interaction of R-BINOL and S-BINOL with HSA	121
7.2.4. Calculations of the quenching of fluorescence intensity, fluorescence lifetime and synchronous fluorescence intensity of HSA	123

with the BINOL enantiomers	
7.2.5. Resonance energy transfer from protein HSA to the bound BINOL enantiomers	126
7.2.6. Local polarities of the binding sites of BINOL enantiomers in HSA	127
7.2.7. Calculation of binding constants of R- and S-BINOL with HSA	128
7.2.8. Determination of thermodynamic parameters of BINOL-HSA interaction.	129
7.2.9. Red edge excitation shift for the estimation of the extent of motional restriction of the BINOLs bound to HSA	130
7.2.10. Fluorescence anisotropy for the assessment of the molecular mobility of the BINOLs bound to HSA	130
7.2.11. Urea-induced protein unfolding study for revealing the extent of conformational rigidity offered by the BINOLs to HSA	131
7.2.12. Circular dichroism for the quantification of the changes in the secondary structure of HSA upon binding of the BINOLs.	132
7.2.13. Molecular docking calculations for the binding of BINOL enantiomers with HSA	133
Chapter 8: Concluding remarks	136
Chapter 9: References	139
