Contents

Introduction 1

Scope of work 27

I. Selection of the parent strain 31

II. Optimization of fermentation condition 45

III. Effect of L(+) sorbose on the release of β-amylose 69

IV. Characterization of the enzyme produced by the wild strain 75

V. Selection of improved strains 82

a) first step mutation

b) second step mutation

c) third step mutation

VI. Purification and Characterization of β-amylose produced by the mutant strain 97

VII. Starch digestion by the enzyme 112

Discussion 120

Summary 153
