CHAPTER XI
11. CONCLUSION

- The present pharmacognostical work lays down the standard parameters which can be useful for checking the authenticity of the medicinal plant and it also ensure the quality of crude drug and for preparation of the monograph.

- In the present study, a stable topical ointment has been developed with the effective ethyl acetate fraction of *Dodonaea viscosa* leaf and the results provided strong support for the effective wound healing activity of developed ointment, making it a promising candidate for future application as a therapeutic agent in tissue repairing processes associated with skin injuries.
