Acknowledgements

I am deeply indebted to my supervisor Professor Dr. Basabi Bhattacharya, Professor, Department of Economics, Jadavpur University and Regional Director, Professional Risk Managers' International Association, Kolkata Chapter, without whose constant guidance, teachings, motivation and support, it would have been impossible for me to accomplish this task of completing my thesis work.

I am also immensely grateful to my joint supervisor Professor Dr. Asesh Roychowdhury, Professor, High Energy Physics, Department of Physics (formerly Head of the Department), for teaching me all the tools from nonlinear dynamics needed for this work as also for his constant guidance and motivation throughout the tenure of my work.

It would be apt to mention that this thesis would never have been possible without the active involvement of both my supervisors.

I am also highly indebted to Professor Dr. Constantino Tsallis, Professor, Santa Fe Institute, New Mexico and Brazilian Academy of Sciences, Rio de Janeiro for his invaluable inputs on Tsallis Distribution which was vital in the design of simulation programmes.

I take this opportunity to express my heartfelt gratitude to Professor Dr Ashok Banerjee and Professor Dr B. B. Chakrabarti, both Professors, Finance & Control
group, Indian Institute of Management Calcutta, for the valuable interaction regarding my empirical work as also for the encouragement I received from them.

I would like to thank Dr Bibhas Saha, Sr. Lecturer of Economics, Faculty of Social Sciences, University of East Anglia, United Kingdom for the invaluable inputs and encouragement received from him regarding portions of my work related to empirical investigation using methods of nonlinear dynamics.

I also thank Professor Dr. Timo Teräsvirta, CREATEES, Professor, School of Economics and Management, University of Aarhus, Denmark and Professor Dr Tae-Hwy Lee, Professor of Economics, Department of Economics, University of California, Riverside for their invaluable inputs on Neural Network tests for nonlinearity.

I would like to express my gratitude to Professor Dr Mark E. Rubinstein, Professor, Haas Finance Group, Haas School of Business, University of California, Barkley, for his help on review of Option Pricing models.

I also thank Dr. Arnab Laha, Faculty of Operations and Quantitative group, Indian Institute of Management, Ahmedabad, for his encouragement and valuable interaction that I had with him regarding my work.

I would like to thank Professor Dr Bani Kant Misra, Professor, Accounting and Finance, Xavier Institute of Management Bhubaneswar, for the motivation and positive feedback on the empirical testing of asset pricing models that I received from him.
I also express my gratitude to Dr. Costas Vorlow, Research Economist, Division of Economic Research & Forecasting of Eurobank EFG, Athens headquarters, for his help on related literature.

I thank Dr Indranil Mukherjee, Reader, School of Management, West Bengal University of Technology, for his invaluable advice, help and encouragement during the initial phase of my work which enabled me to take up this project in the first place.

I express my gratitude to Dr Santo Banerjee, Senior Research Associate, Department of Mathematics, Politecnico di Torino, Torino, Italy and Research Scientist, Micro and Nanotechnology Unit, Techfab s.r.l., Chivasso, Italy, for his active support and for familiarising me with the MATLAB environment.

I would also like to thank Dr Pranab K Dan, Reader and Head, Department of Industrial Engineering Management, West Bengal University of Technology, whose constant support and words of advice on general directions of research had been a great source of inspiration for me throughout this period.

I take this opportunity to express a special thanks to my high school teacher Mr. S. Sanyal for instilling in me an eternal quest for knowledge and zeal for excellence which has helped to come this far through all the highs and lows.

I would like to thank all my professors in the Department of Production Engineering, Jadavpur University and Institute of Business Management, Jadavpur University without whose teachings I would not have come this far.
I would like to thank all the staff members of the Department of Economics and Faculty of Arts, Jadavpur University who have helped me whenever required without any qualms.

I would also like to sincerely thank the management, staff, colleagues and dear students of Army Institute of Management, without whose active support this thesis would not have been possible.

Last but not the least I owe this work to the never-ending support of my wife, my parents and my dear daughter all of whom bore with my idiosyncrasies during the entire period of my work.

Kousik Guhathakurta
