ACKNOWLEDGEMENTS

I am indebted to a number of individuals who were instrumental in making this work possible. I would like express my sincere gratitude to the management of Glenmark Research Centre for giving me opportunity to pursue Ph.D. utilizing the existing infrastructure and resources in this regard. I am grateful to Mr. Glenn Saldanha, CEO-Glenmark Pharmaceuticals Ltd., for encouraging me to pursue Ph.D.

My heartfelt gratitude to Dr. Swaroop, President- Glenmark Research Centre, and to my co-guide and Vice-president – Biological Research division, Dr. Shridhar Narayanan, without whose initiative, constant support and encouragement, perhaps I would not have been able to start and finish the Ph.D. work in time. Shridhar, as I call him, was always with me, extended proactive support all the time and critically evaluated each aspect of the project work at every stage. If any body finds this thesis to contain minimal number of errors, scientifically, linguistically or in the flow of contents, I sincerely attribute the same to Shridhar. I can not express my feelings more vividly other than saying that I would forever cherish their role in shaping my career in basic research.

Prof. Malaya Gupta, my guide in M. Pharm. as well as Ph.D. is the person whom I am deeply indebted to. She has been advising me to pursue higher studies from my M. Pharm days. I would cherish her scientific spirit and benevolence forever. I am also indebted to my co-guide, Prof. UK Majumder, who encouraged me to pursue Ph.D. Both of them provided a healthy and scientific platform based on which I was able to carry out my experimental work at Glenmark Research Centre, Mumbai, miles away across the subcontinent, with freedom. Words fall short of acknowledging their role in furthering my academic credentials and career.

On the personal front, my wife Rama, and kids - Kaavya and Santosh, gave me unflinching support and sacrificed many things of personal significance in making me realize my goal. Without their cooperation, I would not have been able to pursue Ph.D. I owe a lot to my parents, sister - Smt. Sita and brothers –Srinivas and Ravi, for giving me encouragement and support in completing the work in time.
I would like to personally acknowledge my colleagues, Amol, Nimisha, Balakumar, Dhanalaskhmi, Chandrasekahr Misra, Daisy, Imran, Vinod, Pawar, Bharat, Kantikiran, Suresh, Hasan and Rahul for their help and assistance in carrying out some of the experiments.

Special thanks to Daisy for her \textit{in vitro} help, to Imran, Vinod, Pawar and Bharat for their help in toxicology and histology and to Dr. Husain for deciphering the histological findings.

I extend my sincere thanks to my lab colleagues, Rajeshwar, Uttam, Ashok, Senthil, Thamilselvan and Manikandan, all of whom immensely helped in making the progress of my research work smooth and seamless. Without their timely help at any time of the day, I would have faced an uphill task in maintaining all the correspondence at Jadavpur University.

My gratitude to also extends to the lab technicians Sangamesh, Sidaramappa, Kamal, Vighnesh and to the staff of Animal house, who played an important role in maintaining all the animals used in the experiments meticulously and invariably made my tasks much easier at Glenmark Research Centre.

I sincerely thank all those individuals whose names do not appear here but have directly or indirectly contributed at various occasions in carrying out my work and furthering my goal.

Finally, my sincere thanks to the Head, Dept. of Pharmaceutical Technology, and Dean, Faculty of Engineering and Technology at Jadavpur University, for giving me an opportunity to pursue Ph.D.

Regards,

Anupindi Raghuram
