ACKNOWLEDGMENTS

Words cannot express the deep gratitude that I have to my guide, Dr. Immanuel Thomas, Lecturer, Department of Psychology, University of Kerala, for everything that he has done for the completion of this work. It would be impossible to make a list and acknowledge all that he has done. His wife and young children too deserve my gratitude for bearing with my demands on their personal life.

I thank Dr. George Mathew and Dr. M.K. Mathew for giving me permission to use their tests.

I sincerely thank all those who participated in my work by responding to the questionnaires and giving suggestions. Their goodwill and time was valuable for conducting this research. I also acknowledge the Heads of the various colleges and the seminary for giving their permission to allow the collection of data from their students.

I must thank the University Grants Commission for the funding and the Head of the Department of Psychology, Kerala University for the facilities provided to carry out this work.

Two persons I thank on a personal level are Chitra, my friend (for all that running around and for accommodating me) and Mathai Fenn, my husband. My husband’s name deserves an important part in this acknowledgment for had it not been for his untiring help, his encouragement and his academic, emotional and financial support, this thesis would not have come through.

But this thesis is dedicated to my son, Amit, who took the brunt of this work.
