ACKNOWLEDGEMENTS

All praise goes to the Almighty for having guided me towards the fruitful completion of this doctoral thesis.

No words of praise and gratitude can match the magnitude of the continuous support given to me by my guide and Supervisor Dr. K. Balasubramanian, for producing this thesis. From the very beginning of this study to the time of its completion, he was a constant source of inspiration and encouragement. Sir, I thank you for all that you have done to me.

With a deep sense of love I acknowledge the innumerable acts of silent care, my husband and my children provided me which helped me endure every hardship.

I owe my sincere gratitude to my dear brother for the technical help rendered throughout the completion of the thesis.

I hope to cherish forever the rewarding moments of interaction I had with my learner participants, who lent their unflinching co-operation throughout the experiment. They, I humbly admit, led me to new vistas of ELT and helped me improve in my profession. My heart goes out to them.
