Acknowledgements
Pursuing Ph.D. has been a great learning for me with its shares of painful as well as enjoyable experiences. I find myself fortunate to share my feelings while I am writing the thesis. It’s just like climbing a high peak, step-by-step, accompanied with bitterness, hardships, frustration, encouragement, trust and with so many people’s kind help. Ph.D. has made me learn the value of patience, perseverance, hard work, and the will power to stand by my own at worst times. Today I discover myself, not only enriched by knowledge but also with innumerable lesions that will help me to grow as an individual too. When I found myself at the top enjoying this beautiful journey, I realized that it was, in fact, the teamwork that got me here. Though only my name appears on the cover of this thesis, a great many people have contributed to its successful accomplishment. I owe my gratitude to all those people who have made this dissertation possible and because of whom this experience has been one that I will cherish forever.

At first, my deepest gratitude goes to my supervisor and mentor, Prof. Gaurisankar Sa. I have been extremely fortunate to have an advisor like him who gave me the freedom to explore on my own, and at the same time, he provided the proper guidance to recover whenever I faced difficulties in my research. This freedom of exploring something of my own though fetched difficulties in the early days, however it groomed me as an independent researcher. He taught me to think about the fundamental queries of basic sciences with meaningful thoughts and solved them with insightful ideas that enriched my scientific thinking. I am profoundly grateful to him for the long discussions that helped me to sort out the technical details of my work. He always encouraged me to think an experimental finding from different angles and find out the most probable explanation behind it. He has always been motivating, encouraging, and enlightening. I am thankful to him for giving me the opportunity to grow in this field of research. His scientific excellence, enthusiasm, decision-making ability and tenacity made him an exceptional mentor in cancer biology fields. He was always prompt and responsive to appreciate any good ideas that I might have had, but it was always his critical insight and advice that would convert that good idea into an excellent one. He always encouraged me to solve any complicated scientific problem by thinking deeply and to carry out experiments with full liberty. I have learned a lot from him about research, how to tackle new problems and how to develop techniques to solve them. Throughout my tenure, I always tried to learn many of his amazing tricks regarding the practical experimentation. He has always encouraged me and has shown immense trust in me that boosted my confidence and scientific skill.
Above all, he is a fantastic teacher, and I have learned most of the things related to my studies, from biochemistry, cellular imaging, cell signaling to computational chemistry. Without his help and support, this thesis could not be completed. His continuous persuasion and encouragement even in upsetting and troubled times kept up the spirits that propelled me to achieve something better.

I would also like to express my gratitude towards my joint-supervisor and guide Prof. Tanya Das. She taught me very important and essential facts about the basics of experiment designing, along with the writing of scientific papers. Her insight to ask the reason behind every experimental result has helped me to develop immensely as a researcher. Her insightful comments and constructive criticisms at different stages of my research have always motivated me to explore the findings in much more depth. Many times her questions regarding my work gave me a new direction to think and excel. I greatly admire her exceptional ability to explain and extract interpretations of experimental data in a much simpler way. Here I remember a quote of my all time favorite Albert Einstein “If you can’t explain it simply, you don’t understand it well enough.” I am grateful to her for explaining the rigid scientific facts to me in rather simple words, which helped me enormously to build my concept. This always enhanced the quality and importance of my work, and I have tried eagerly to learn this quality from her. Without her encouragement and constructive criticism, my work couldn’t have achieved the present quality. Prof. Tanya Das has always reminded me the importance of becoming a decent human being at first along with being a sound scientific researcher. She has taught me so many simple, yet precious practices of life, which will always be with me. I would once again like to express my heartfelt thanks towards her as without her help and support this thesis could not be completed.

Some faculty members of the Institute have been very kind enough to extend their help at various phases of this research, whenever I approached them, and I do at this moment acknowledge all of them.

I am grateful to Dr. Subhrangsu Chatterjee for his technical excellence and a tremendous grasp of Structural Biology experimentation that had a great impact on my project.
I am sincerely thankful to Prof. Paramesh C. Sil, Dr. Kaushik Biswas, Dr. Atin Kumar Mondal, and Dr. Mahadeb Pal for their suggestions and kind help during my entire Ph.D. tenure.

I am grateful to Dr. Abhrajyoti Ghosh for his immense support. During the difficult stages of protein purification and in-vitro protein-protein association experiment, he was there to help me as my mentor. Without his experimental knowledge and such friendly cooperation, that part of revision work wouldn’t have been possible for me.

I am also grateful to Prof. Parimal C. Sen, the ex-chairman, Division of Molecular Medicine, and Prof. Subrata Majumder, Chairman, Division of Molecular Medicine, for providing excellent working facilities and a pleasant atmosphere in the esteemed department.

I am also extremely indebted to Prof. Siddhartha Roy, Director of Bose Institute, for providing the necessary infrastructure and resources to accomplish my research work.

I consider myself as an extremely fortunate person to be able to work in a laboratory where I have the privilege of working alongside with some of the most wonderful persons, both regarding their scientific knowledge as well as exceptional human qualities. In this laboratory, we always felt like that we belong to a family.

I would like to extend my sense of appreciations towards my senior lab members Dr. Minakshi Mazumdar, Dr. Amrita Dutta, Dr. Pallab Ray, Dr. Puspak Bhattacharjee, Dr. Arghya Adhikary, Dr. Samik Chakraborty, Dr. Suchismita Mohanty and Dr. Dewan Mohd. Sakib Hossain, Dr. Shilpi Saha, and Dr. Sharavanti Mukherjee for sharing valuable research experiences and helping in my work throughout their attachments.

I am indebted to all my lab mates who have always supported me over the last few years. I am thankful to Deblina Guha for discussing scientific problems, providing selfless support and sharing enjoyable and hard moments as a friend during these periods. She has been an extremely good human being and a great friend of mine who was beside me during both my good and bad times. I have learned so much from her not only as a researcher but also as a human being. Her scientific excellence and technical skills also benefited my research work exceptionally.

I am very grateful to Dr. Abir Kumar Panda, Argha Manna, Poulami Khan, Sreeparna Chakraborty, and Kirti Kajal for their company over five years. Thank you very much for
sharing all the priceless moments during these years with me. Thank you doesn’t seem sufficient, but it is an expression of appreciation and respect to every one of them for their support, encouragement, care, understanding and precious friendship. At every hard moment, they were always there to support me in every possible way. We used to share and exchange both the success and failures of experiments like members of a close-knit family. I will always remember all the enjoyable moments, frustrating situations, and insightful discussions that we have been sharing since the beginning of my Ph.D. life.

I imagine if they had not been there to share every good or bad moment during this phase, whether this experience would have been that much precious as it is. My heartfelt gratitude goes to every one of them for making this experience such beautiful and memorable one.

I am also thankful to Sayantan Bose for his support and co-operation for the last three years. Being an immediate junior to me, he has helped me in my research in every possible way whenever I asked for. Others who had joined recently also kept the laboratory warm and happy. I should not forget to mention Dia, Tania, Apoorba, Daipayan, Shruti, Dipanwita, Subhanki, Apratim, Udit and ex-lab mates Mohor, Anumeha, Shrutarshi, and Debabrata. They all were a constant source of encouragement. Without all of their help in the final stages, may be this thesis would have taken a much longer time to complete.

I would also like to thank other fellow members in Bose Institute like Rajiv Kumar Kar, Jyotsna Bhat, Barun Mahata, Joydeep Roy, Sahana Mitra, Sonia Chatterjee; all of them have been very helpful, co-operative, enthusiastic, and wonderful human beings and without their extensive support, fruitful scientific discussion and intense technical skills my research would have been incomplete.

The thesis would not have come to a successful completion, without the help that I received from the staff of the Molecular Medicine Division. All the Molecular Medicine department staff, namely Indrajit Ray, Bijoy Munsi, Dipanjana, and Nilanjana has been very supportive and has maintained all administrative works in time so that our lab could run smoothly. Sourav Samanta and Sanghamitra Das helped me in confocal microscopy apart from supporting in other practical laboratory techniques. I especially appreciate Uttam Kumar Ghosh, Somnath Chakraborty and Shankar Prasad Bari who have always helped me in administrative stuff and encouraged me throughout as my elder brother. I am thankful to them. Subrata Da cleans our lab everyday so that we could carry out our
research in the healthy and hygienic environment. They always provided extensive support throughout the years and stood beside me whenever the situation became harsher and more frustrating. I will never forget all the enjoyable moments we have shared together with them during this period.

I also would like to acknowledge Asim Kumar Poddar, Mrinal Das, Ranjan Kumar Dutta of the PD Laboratory, and all the staff of the Bose Institute Library and BIC for their kind patience and support to complete my research work successfully.

I would also acknowledge the University Grants Commission, Govt. of India, for fellowship grants and contingency and Department of Science and Technology, Govt. of India, for the financial support for these studies.

I would also like to express my gratitude towards my maternal and paternal grandparents; Late Radhikalal Saha, Late Binodini Saha, Late Shambhunath Saha Roy and Late Renu Saha. Their love, affection, and blessings have made me what I am today.

I would like to expand my appreciation towards Anupam and Sanchari, my adorable elder brother and sister-in-law for their love, encouragement, infinite support and unshakable faith in me. My elder brother has always been very inspiring from my childhood regarding my studies. It is his inspiration, support, and constant faith in me that I am here today. He has always been like my friend, philosopher, and guide. At moments whenever I came short in fulfilling my research capabilities, his words always motivated me and made me capable of achieving my goals. Except their support, I wouldn’t have come across this much journey. I should also express my heartiest love for my little niece Aishani who has always made me relieved at my tough times through her simple words and innocent smiles. I also acknowledge other family members and friends for their trust and mental support that has always motivated me.

Of course, no acknowledgments would be complete without expressing gratitude to my parents, Mr. Amalendu Saha and Misses Kalpana Saha. I strongly believe what I am today is only because of them. I greatly admire and respect my parents for lessons that they have taught me about life and the values that they implanted in me about honesty, sacrifices, and humanity. Explaining their influence in my life is beyond the scope of my words and expressions, and the only thing that I can write is, I am honored and privileged to be their daughter. Both have imbibed many admirable qualities in me and given me a good foundation to face life confidently. They have taught me the values of hard work and self-
respect, about persistence and how to remain focussed at your goal until it is achieved. Mom, especially, has always been a great role model of resilience, strength, and character. Her words many times gave me proper direction in my life at times of difficulties. Despite knowing the least about my subject area of research, she has constantly motivated me about my work, my experiments, and research. From my father I have always learned how to keep cool and happy even at moments when everything goes wrong. It is he from whom I learned that for the truth you could sacrifice everything but for nothing, you can sacrifice the truth. He has been a great personality in my life I have ever met with. They have been inspirational in every step of my life, and they have encouraged and helped me throughout my life, they never complained about the duties that I had not carried out towards them all these years when I remained engaged with my studies and research, rather they always cheered me up and never let me think about all those things. They always stood beside me, encouraged me and made a lot of sacrifices for me. Both have always expressed their trust in me and how much proud they are of me and how much they love me. I too am proud of them and love them very much. I am grateful to them for always being the most inspiriting part of my life.

Last but not the least; I will express my intense gratitude towards my all time idol Swami Vivekananda. From my very childhood, this man has had an enormous influence in my upbringing. His life, his philosophy, his outlook and great respect for hard work has always stimulated me and made me more determined in achieving my aim. His inspirational quotes always boosted up me at times of failures. In every day of my life, I try to follow his thoughts and philosophies “Arise, awake and stop not till the goal is reached.”

Taniya Saha
