Acknowledgements

I've been waiting for this moment anxiously to acknowledge every person who has contributed in helping me to accomplish this dream. Flashbacks of the day I entered JNU, with a hope to study in India’s finest university come to mind. What touched me the most about JNU, was the warm atmosphere, the student – teacher relationship and the freedom to learn, experiment and question. It’s been five years in JNU, and every single moment of it was a roller coaster ride. What made those years enjoyable were a number of people whom I wish to thank from the bottom of my heart.

Neither would this space be enough for thanking all those who made these five years a memorable one, nor would it be just enough to say “THANKS”. The support and guidance received was in abundance and there is no way I could ever repay it. All I can say is just a few words to show that I’m deeply touched by them.

I begin with my supervisor, Prof. Alok Bhattacharya: I am deeply grateful to him for his consistent guidance, fruitful discussions, a positive approach towards problem solving, and extreme patience at times of paper submission deadlines. Above all for rewarding me for every paper accepted and consolation and boosting at times of failure. Besides helping me to improve my scientific aptitude he taught me to multi-task, collaborate, and manage time efficiently. I fall short of words to describe the immense impact he has made not only on my thesis but also as a teacher on my life.

I am thankful to Prof. Ramakrishna Ramaswamy for helping me to develop my mathematical aptitude. He is the person who introduced me to Systems Biology, who helped me to develop paper writing and communication skills and whose positive criticism, deep insight and perfectionist attitude helped shaping and fine-tuning of the papers. Prof. S.N Maheshwari’s appreciation and encouragement helped me to learn algorithms and improve my computational skills.

Prof. Indira Ghosh’s constant boosting helped me to achieve preset goals. I am also indebted to her for being the most supportive Dean, and providing us with the best of facilities. Dr. Andrew Lynn’s friendly, warm and cheerful disposition made me realize that one could also enjoy and live life to the fullest along with hard work.

Dr. Rashi Gupta has always extended a helping hand with a smiling face, I would like to thank her for helping me build the statistical aspect of my work. I am also grateful to Dr. Ritu Kulshreshtha for helping me improve my knowledge on miRNAs and for mentoring the deep sequencing analysis.
The Centre was always a home away from home, and many of my colleagues made me feel very cared for. Alok, Smriti, Sudhanshu and Richa were always there at all times and in every walk of life. I thank them for being my emotional support, for sharing my ups and downs, for being there through every lowest low and highest high. I will never forget the time we spent together, the lunch and tea breaks where we laughed and lightened each other’s burdens.

A special mention about an “Angel” I met a few months back; Richa has been all throughout the thesis writing and binding phase with me as a strong moral booster. I can never forget the sleepless nights she spent with me, helping me to finish the writing work. I also thank Rahul Tyagi for sparing his precious time for proof reading of my thesis and giving most valuable suggestions and comments.

Finally, a million thanks to my Parents Carlton and Betty Vaz, for believing in me, supporting me, encouraging me to fulfill my dreams. My brother Sheldon Vaz has been the most caring and protective brother. I am indebted to him for the best things in my life.

Above all I am very grateful to my Sweet Jesus, for giving me this opportunity which indeed is a great blessing!

To all of you'll I dedicate this thesis...my first baby a lifelong treasure.....

With heartfelt feelings beyond any comparison and beyond any measure....

Ms. Candida Vaz
Dedicated to My Beloved Parents and My Brother
