AIMS
&
OBJECTIVES
2.0 AIMS AND OBJECTIVES

1. To identify whether the tumor suppressor protein p53 could bind to the p53 DBS in the p53 gene promoter.

2. To identify the transcriptional regulators that are associated with p53 in recognizing p53 DBS, and controlling p53 gene transcription.

3. To study whether p53 along with the transcriptional regulators could autoregulate its own transcription, in a cell-type specific manner.
