Chapter 1
INTRODUCTION ..........................................................................................01 - 14

Chapter 2
REVIEW OF LITERATURE .......................................................................15 - 51
  2.1 Nutrition and health scenario in India over the decades. ......................15
  2.2 Correlates of Body Mass Index among adults. --------------------------25
  2.3 Comparative profile of anthropometry and body composition ..................37
  2.4 Need for nutrition education on lifestyle modification among adults ........42
  2.5 Scope of modern tool for nutrition and health awareness creation ..........47

Chapter 3
METHODOLOGY .....................................................................................53 - 82
  3.1 Selection of area and subjects -------------------------------------------53
  3.2 Study design -------------------------------------------------------------55
  3.3 Conduct of the study ----------------------------------------------------56
  3.4 Techniques employed for anthropometric assessment .........................57
    3.4.1 Physical characteristics ---------------------------------------------57
  3.5 Tools and techniques used in the computation of energy balance ..........65
    3.5.1 Energy intake --------------------------------------------------------65
    3.5.2 Energy expenditure --------------------------------------------------66
  3.6 Assessment of body composition -----------------------------------------70
    3.6.1 Determination of fat free mass --------------------------------------71
    3.6.2 Determination of body fat mass -------------------------------------72
  3.7 Development of a computer based intervention tool ----------------------76
  3.8 Data analysis and interpretation ----------------------------------------82
Chapter 4
RESULTS AND DISCUSSION........................................................................................................83 - 172

4.1 Background information of the adult population studied--------85
  4.1.1 General characteristics of the selected subjects----------- 86
  4.1.2 Demographic profile of the selected subjects --------- 88

4.2 Anthropometric parameters and Body Mass Index of
the selected adults ------------------------------------------89
  4.2.1 Mean height, weight and BMI of the selected adults ------ 90
  4.2.2 Categorisation of selected adults based on BMI--------- 93
  4.2.3 Dual burden of undernutrition and overnutrition
    among the selected adults ----------------------------- 95

4.3 Correlates of Body Mass Index of the selected adult
population-----------------------------------------------------97
  4.3.1 BMI by age ------------------------------------------ 97
  4.3.2 BMI by type of family ------------------------------- 99
  4.3.3 BMI by gender----------------------------------------101
  4.3.4 BMI by area of residence-----------------------------103
  4.3.5 BMI by religion--------------------------------------106
  4.3.6 BMI by educational level-----------------------------108
  4.3.7 BMI by occupational activity------------------------110
  4.3.8 BMI by personal income -----------------------------112

4.4 Energy balance in relation to BMI --------------------------114
  4.4.1 Height, weight and BMI of the selected subjects------ 115
  4.4.2 Estimates of energy intake of the selected subjects as
    per BMI-----------------------------------------------116
  4.4.3 Energy expenditure------------------------------------120
  4.4.4 Energy balance of the selected adults----------------127
  4.4.5 Linear regression analysis and Pearson’s correlation
    coefficient between BMI and components of energy
    balance -----------------------------------------------129

4.5 A comparative analysis of the BMR predictive equations
  in terms of BMI-------------------------------------------132

4.6 Body composition in relation to Body Mass Index-----------134
  4.6.1 Waist circumference of the selected subjects in relation to
    their BMI---------------------------------------------135
  4.6.2 Categorisation based on waist circumference profile-----136
  4.6.3 Hip circumference of the selected subjects in relation
    to their BMI-------------------------------------------138
  4.6.4 Waist to hip ratio of the selected subjects------------ 139
  4.6.5 Waist hip ratio profile as per BMI of the selected
    subjects---------------------------------------------140
4.6.6 Skinfold measurements of the selected subjects as per their BMI 141
4.6.7 The anthropometry of the upper arm of the selected subjects as per BMI 147
4.6.8 Per cent body fat (PBF) as per BMI status of the selected subjects 155
4.6.9 Body composition pattern of the selected subjects 164
4.7 Development of a software package 166
4.7.1 Background information 166
4.7.2 Evaluation of the software 167

Chapter 5
SUMMARY AND CONCLUSIONS 173 - 192

BIBLIOGRAPHY 193 - 224
APPENDICES 225 - 246
