STUDENT DECLARATION .................................................................................................................. III

CERTIFICATE ........................................................................................................................................ V

ACKNOWLEDGMENT ...................................................................................................................... VII

ABSTRACT ........................................................................................................................................ IX

LIST OF FIGURES ........................................................................................................................ XV

LIST OF TABLES .......................................................................................................................... XIX

1 INTRODUCTION ........................................................................................................................... 1

2 LITERATURE SURVEY AND GAP IDENTIFICATION ................................................................. 7

2.1 INTRODUCTION .......................................................................................................................... 7

2.2 RESEARCH ON TTO: THE PAST, PRESENT, AND FUTURE ..................................................... 8

2.3 CLASSIFICATION OF TTO PROBLEMS ..................................................................................... 33

2.3.1 Classification Based On Objective Functions ........................................................................... 33

2.3.1.1 Single Objective Optimization .......................................................................................... 33

2.3.1.2 Multiobjective Optimization ............................................................................................. 34

2.3.2 Classification Based On Design Variables ............................................................................... 34

2.3.2.1 Sizing Variables ............................................................................................................... 34

2.3.2.2 Sizing and Shape Variables ............................................................................................. 35

2.3.2.3 Topology and Size Optimization ...................................................................................... 35

2.3.2.4 Topology, Shape, and Sizing Optimization ....................................................................... 36

2.3.3 Classification Based On Constraints Involved ......................................................................... 37

2.3.3.1 Stress and Displacement .................................................................................................. 37

2.3.3.2 Buckling Instability ......................................................................................................... 38

2.3.3.3 Natural Frequencies ........................................................................................................ 38

2.4 SUMMARY ................................................................................................................................... 38
5.2 INVESTIGATION ON IMPROVED ALGORITHMS .................................................. 118
  5.2.1 Investigation on improved algorithms with continuous sections ......................... 121
    5.2.1.1 The Friedman Rank Test on improved algorithms ...................................... 127
  5.2.2 Investigation on improved algorithms with discrete sections ............................ 127
    5.2.2.1 The Friedman Rank Test on Improved Algorithms .................................... 136

5.3 INVESTIGATION ON THE BENCHMARK FUNCTIONS OF THE CEC2014 ........................ 136

5.4 INVESTIGATION ON MODIFICATIONS IN THE HTS, SOS, AND TLBO ALGORITHMS ............. 141
  5.4.1 Investigation on the HTS, SHTS, SOS, ASOS, TLBO, and ATLBO Algorithms with Continuous
       Sections 141
  5.4.2 Investigation on the HTS, SHTS, SOS, ASOS, TLBO, and ATLBO Algorithms with Discrete Sections
       146
    5.4.2.1 The Friedman Rank Test on Modified Algorithms ...................................... 151

5.5 Compression of the Proposed Algorithms with State-Of-The-Art Algorithms ..................... 151
  5.5.1 Investigation on the 24-Bar Truss for Topology and Size Optimization ................... 152
  5.5.2 Investigation on the 20-bar Truss for Topology and Size Optimization .................. 152
  5.5.3 Investigation on the 72-bar 3D Truss for Topology and Size Optimization ............... 153

6 VALIDATION ........................................................................................................ 155
  6.1 VALIDATION OF THE 10-BAR TRUSS ................................................................ 160
  6.2 VALIDATION OF THE 14-BAR TRUSS ................................................................ 161
  6.3 VALIDATION OF THE 15-BAR TRUSS ................................................................ 162
  6.4 VALIDATION OF THE 24-BAR TRUSS ................................................................ 162
  6.5 VALIDATION OF THE 20-BAR TRUSS ................................................................ 163
  6.6 VALIDATION OF THE 72-BAR 3D TRUSS ............................................................ 164
  6.7 VALIDATION OF THE 39-BAR TRUSS ............................................................... 166
  6.8 VALIDATION OF THE 45-BAR TRUSS ............................................................... 167
  6.9 VALIDATION OF THE 25-BAR 3D TRUSS ............................................................ 168
  6.10 VALIDATION OF THE 39-BAR 3D TRUSS .......................................................... 169
