Exposure to the overwhelming freedom of independent research and the subsequent requirement to demonstrate one's ability to make an original contribution to human knowledge is probably the greatest academic challenge one faces during the course of doctoral research work. Although virtually no one meets this challenge without a great deal of sacrifice of time, unstructured leisure, and immediate reward, there would also be very few who do not find that the achievement was well worth the sacrifice in terms of sheer intellectual satisfaction.

I am extremely grateful to Professor P.S. Satsangi for having exposed me to the wonderful world of systems and software engineering, and guiding me through it. It is difficult to describe how much I have learnt from him, or to even touch upon the rare combination of freedom and unhesitating support he provided me as we moved into connectionism. His unabated enthusiasm was a marvelous antidote for my occasional despondency. He went out of his way to read innumerable versions of all the chapters, and during our discussions I found in his depth of understanding, a new way to think.

Dr. Atri Bhargava has been a continuous source of support and motivation for me through these years. He has been extremely patient with me and has overlooked all the delays in my Departmental work (especially my perpetually late submission of student assessment!) in a way that is difficult to forget. Both his, and Professor G.P. Srivastava's gentle reprimanding kept me in the laboratory at the computer for all those long hours and helped me get the thesis completed in time.
Dr. S.P. Gupta encouraged me throughout my work and shared with me many of his invaluable ideas to help me put the Introduction into final shape. Thanks to Nandini too, for going through the draft of the Introduction so meticulously and uncovering my penchant for commas!

Someone who really understood what it means to finally wind up a thesis was Dr. Soam Prakash. He stood by me through the final hours, and when something went wrong he helped me find consolation by showing me a new Design through the kaleidoscope of religion.

I'd like to thank Dr. A.K. Sinha, who has been both my teacher and friend, for encouraging me throughout my work, and Gursaran particularly, for helping me check the algebra of all those tedious sensitivity equations. My thanks too, to Dr. Sahab Dass for his help during the summer of 1990. I would also like to thank the staff in the Department of Physics and Computer Science for their cooperation and help which they extended whenever needed.

Mr. S.C. Srivastava, helped transform my illegibly scrawled diagrams into neat figures overnight, and Mr. S. Sahni of the Computer Center got my hard disk going just when I thought everything was lost. My thanks to both of them.

My students must be mentioned, because they did a considerable amount of running around for me. They deserve to be thanked for their help, which was forthcoming whenever required.

In the course of this endeavor, I have often got pressurized to an extent where I may have been a bit unsociable, and more often than not, my family had to bear the result of this. I thank my parents, and wife, Ritu, for their unshakable understanding and support, which I knew would always be there.

Dayalbagh
