ACKNOWLEDGEMENT

This Ph.D. thesis is the reflection of my Ph.D. journey which was full of learning experience indeed. It is the sweet outcome of continuous support and encouragement of my mentors, family, friends, and colleagues. I am obliged to everyone whose support and help made this study possible.

With immense pleasure, firstly I would love to express my deep gratitude to my mentor Prof. Kiran Kalia, to whom I owe this research work. She is full of positivity, a continuous source of motivation, and indeed more than a PhD guide for me. I always get short of words when I want to acknowledge her for throughout guidance in pursuing my research work and troubleshooting the problems, being my path indicator wherever I needed it the most, and always inspiring for the better opportunities. Apart from research work, I learnt various essential skills required for an academician as well as related to life, for which I am always grateful to her.

I heartily acknowledge my co-guide Prof. Harish Padh for whom the word thank you is not enough. He was so humble and co-operative to me and helped me at the best he could during my whole journey. Despite his busy schedule during his tenure of Vice-chancellor, he always guided me in research. His heartfelt appreciation and positive personality provided me strength throughout the journey.

It is my great pleasure to thank Prof. K. C. Patel, Head, Post-Graduate Department of Biosciences, Prof. A.V.R.L.N. Acharya, Prof. (Mrs.) Kiran Kalia and Prof. Harish Padh, former Head, Post-Graduate Department of Biosciences, Sardar Patel University for providing the support for conducting the research work. I am sincerely gratified to the faculties of the department who taught and helped me to pass the coursework examination. I am so much grateful to Prof. T.V. Raman Rao for his unlimited moral support. I would like to thank Mr. Nitin Solanki for making available the Central instrument facility needed to perform my research.

It’s my fortune to acknowledge P. S. Medical College and staff, especially Dr. Jyoti Mannari, a Physician and other Ophthalmologists for diagnosing the patients and allowing me to collect their samples. I especially thank to all the patients and healthy participants for giving the samples to conduct the present study, without which we could not make it possible.
I am obliged to Dr. D. P. Raykundaliya, Assistant professor, Statistic department, Sardar Patel University for his valuable guidance for performing statistical analysis. I would also like to extend warm thanks to Dr Prakash Kooringa, for his valuable help for allowing me to use their lab facility.

I feel fortunate for having highly co-operative and supportive lab mates, Mr. Devang Khambholja, Ms. Sejal Desai, and Ms. Dhara Patel. Their help, love, and care throughout my journey created a comfortable and joyful atmosphere to work. I appreciate each and every help provided by my friends which I could not mention here, yet it is in my heart.

I especially acknowledge University Grant Commision, New Delhi for funding part of my Ph.D. work and providing me a fellowship that buttressed me to carry out the research work comfortably.

I owe a lot to my parents, Dr. Naresh Jajal and Mrs. Nayana Jajal, whose continuous encouragement, love, and support at every stage of my personal and academic life, allowed me to see this achievement come true. My parents are my biggest source of inspiration who planted the seed that made me to dream for a good career and to become self-reliant. Besides, my younger brother, Meet Jajal, always supported me and showed his love to be delightful during whenever I visited my home place which served as a fuel to perform my work.

Above all, I owe it all to Almighty God for granting me the opportunity and all necessary wisdom, health, and strength to undertake the research work and making possible its completion.

Dhara Jajal
