ACKNOWLEDGEMENTS

First and foremost, I would like to thank Almighty from the core of my heart for bestowing endless blessings upon me and to carry out my work successfully, as no work is accomplished without his grace and guidance.

In completing this piece of work, apart from my own labour, there is enormous contribution from many people without whom this work would not have taken the present form.

I should fail in my duty if I do not record my profound sense of indebtedness and heartfelt gratitude to my esteemed, eminent and learned supervisor, Prof. R. K. Bamezai, for his valuable suggestions, unstinted help, perpetual encouragement, sagacious guidance, inspiration, keen interest, moral encouragement and blessings and even an effort to say his bare thanks would be underestimation of his values, obligation and audacious support. His truly scientist intuition, immense interest, constant encouragement, unflagging keenness, highly creative supervision and invaluable expert guidance have made me as a constant oasis of ideas in science, which exceptionally inspire and enrich my growth as a student and researcher. The experience with him is unforgettable in my life.

I acknowledge my deepest thanks to Head of Department, Prof. S. K. Pandey, Department of Chemistry, University of Jammu, Jammu, for providing the necessary facilities and help for carrying out research work during all the stages of my study.

I gratefully acknowledge my sincere thanks to all the respected faculty members for their motivation, helpful attitude, support, suggestion and guidance.
I owe my thanks to all the non-teaching staff of the Department of Chemistry, for rendering a helping hand whenever needed.

As the work successfully reached its destination, there is a sense of achievement, fulfillment and joy. These feelings are multiplied many folds as I know they are shared by nears and dears. I express my appreciation for valuable co-operation and help rendered to me by my research labmates; Dr. Ashwani, Dr. Balwinder, Mrs. Gurpreet, Mrs. Shivangi, Mrs. Tanu, Ms. Taniya, Mr. Shahid and Mr. Ankush. Without their immense support and help I would not have accomplished this undaunting and noble task.

I cherish my association with all my friends; Ms. Heena, Ms. Harsha, Ms. Neha, Dr. Annah and Dr. Dilpreet. I sincerely thank them for their general co-operation, affection and providing congenial atmosphere in the department.

Above all, I owe considerable thank to my parents Sh. B. D. Salgotra and Smt. Neelam whose dedication, love and persistent confidence in me has been a source of motivation for my accomplishments. The work could not have been possible without blessing, love, affection and inspiration rendered to me from them.

I would like to give special thanks to my brother, Dr. Sandeep, for rendering me love, support, encouragement and guidance during the course of my research work.

Finally, I would like to thank everybody who was important to the successful realization of this thesis, as well as expressing my apology that I could not mention personally one by one. To all of them I say “Thanks” from the core of my heart.

Ruby Rani
