CONTENTS

A. INTRODUCTION

B. REVIEW OF LITERATURE

C. MATERIAL AND METHODS

D. OBSERVATION

Studies on control materials

Karyotype analysis

Karyotype analysis from pachytene chromosomes

In vitro studies

Giemsa C-banding

Mitotic cell cycle duration

Studies in the $M_1$ generation

Germination and seedling growth

Cytological studies

Pollen and seed sterility

Seed yield

Field germination, survival and seedling growth

Variants in $M_1$ population

Days to flower in control and treated samples

Post-harvest records of the plant characters

Studied in the M₂ generation

- Germination of seeds
- Mutation frequency
- Chlorophyll mutations
- Chlorophyll estimation
- Other mutations
- Viable morphological mutants
- Non-viable morphological mutants
- Mutagenic effectiveness and efficiency
- Studies on some morphological characteristics

Cytogenetical studies in the mutant plants

- Lax branching mutant
- Feathery leaf mutant
- Bushy mutant
- Male sterile mutant
- Dwarf mutant
- Viridis mutant
- Chloroxantha mutant
- Brown seed-coat mutant

D. 94
Records of different plant characteristics in control and mutant plants  D. 94 -106
Germination and survival  D. 94
Post-harvest findings  D. 98
Sterility types  D.103
Estimation of crude fatty oil  D.103
Seed protein in control and mutant plants  D.106
Biometrical analysis  D.106 - 133
Analysis of variance in control plants  D.106
Variation in quantitative characteristic in control and mutant plants  D.108
Correlation and path coefficient studies  D.112
