# TABLE OF CONTENTS

## Chapter I: Introduction 1 - 51

- Introduction
- Basic Constituents of Oligonucleotides
- Oligonucleotide Synthesis
- Modified Oligonucleotides
- Applications of Synthetic Modified Oligonucleotides
- Oligonucleotide Microarrays
- Scope of the Present Work
- References

## Chapter II: Materials and Methods 52 - 61

- Source of Chemicals
- Instrumentation
- Purification of Solvents
- Oligonucleotide Synthesis
- Deprotection and Desalting
- Synthesis of 5’- and 3’-Modified Oligonucleotides
- Purification and Characterization of Oligonucleotides
- Cleaning of Glass Microslides
- Epoxylation of Glass Microslides
- Scanning Parameters
- References

## Chapter III: 2-O-[2-(4,4’-Dimethoxytrityloxyethyl)]hydroxyl acetaldehyde (DEA) as a Universal Reagent for Spectrophotometric Estimation of Polymer-supported Functional Groups 62 - 74

- Introduction
- Experimental
- Results and Discussion
- References
Chapter IV: Solid Phase Synthesis of Aminooxyalkylated Oligonucleotides, and Their Applications in the Fabrication of Microarrays

Introduction
Experimental
Results and Discussion
References

Chapter V: Construction of Microarrays using Oligonucleotide-trimethoxysilyl Conjugates

Introduction
Experimental
Results and Discussion
References

Chapter VI: Oligonucleotide-based Hairpin Loops for Sensitive Analysis

Introduction
Experimental
Results and Discussion
References

Chapter VII: High Density Epoxy-coated Glass Slides as an Efficient Substrate for Microarray Fabrication

Introduction
Experimental
Results and Discussion
References

Chapter VIII: Magnetic Micro-dots as Efficient Storage Material for Nucleic Acids

Introduction
Experimental
Results and Discussion
References

Appendix: List of publications
