LIST OF TABLES

Table-1: Comparative incidence and mortality of cervical cancer in India with rest of the world .......................................................... 1
Table-2: Cervical cancer and five year survival rate ................................................. 7
Table-3: HPV type and disease association ............................................................ 9
Table-4: Reported hyper-methylated genes in cervical carcinoma with possibility of mediating their action through miscellaneous, unknown or unexplained mechanisms 41
Table-5: Reported hyper-methylated genes in cervical carcinoma with possibility of mediating their action through inhibition of apoptosis ......................... 42
Table 6: Reported hyper-methylated genes in cervical carcinoma with possibility of mediating their action through uncontrolled cellular proliferation ............... 42
Table 7: Reported hypermethylated genes in cervical carcinoma with possibility of mediating their action through interfering with DNA repair ..................... 42
Table 8: Reported hypermethylated genes in cervical carcinoma with possibility of mediating their action through regulatory effect on other tumor suppressor genes 43
Table 9: List of important drugs that are being considered extensively for their therapeutic potential to revert epigenetic aberrations ........................................... 53
Table-10: Sources of various chemicals employed ............................................... 61
Table-11: Kits Used .............................................................................................. 62
Table-12: Sources of Plastic and Glasswares ....................................................... 62
Table-13: Details of the Instruments employed .................................................... 63
Table-14: List of Restriction Enzymes/ Enzymes/ DNA ladder ............................ 64
Table-15: Various Cell Culture media, chemicals and cell lines ......................... 64
Table-16: Different Buffers and Reagents employed for the study: ..................... 65
Table-17: Different Plasmids and their source ..................................................... 65
Table-18: List of primers used for HPV genotyping ............................................. 70
Table-19: List of RT-PCR primers used in the study ........................................... 86
Table-20: Genes and primers sequences used for BGS ........................................ 89
Table-21: Characteristic of the study population of HPV DNA detected among women with and without cervical neoplasia. ................................................................. 95
Table-22: Prevalence of HPV in malignant and non malignant cervical samples. .... 96

Table-23: Distribution of different types of HPV types and diagnostic category ....... 96
Table -24: Distribution of different types of HPV types and diagnostic category ....... 97
Table-25: Summary of hypermethylated sequences identified by MS-AP-PCR ........ 105
Table-26: Mean percentage methylation of Frg-13 fragment in normal, tumor and cervical samples ..................................................................................................... 108
Table-27: Hypermethylated Genes identified by Differential Methylation Hybridization (DMH) ............................................................................................................. 117
Table-28: Hypermethylated genes having copy number variation and secreted proteins .................................................................................................................. 122
Table-29: Hypermethylated Genes and the pathways altered in cervical cancer ...... 124
Table-30: Genes and their association with diseases ................................................ 126
Table-31: Up- regulated Genes by demethylation.................................................... 129
Table-32: Down regulated genes by demethylation ............................................... 132
Table-33: The different biological pathways identified in Up and Down regulated categories as a result of demethylation .......................................................... 133
Table-34: Methylated Promoter sequences in SiHa and CaSki ......................... 136
Table-35: Copy number Variation analysis ............................................................. 136
Table-36: Secreted protein analysis ........................................................................ 136
Table-37: The methylated genes and pathway profiles in SiHa and CaSki ............ 137
Table-38: Methylation dependent genes ................................................................ 142
Table-39: The sensitivity and specificities of HPV testing and DNA methylation for pre-malignant and squamous cell carcinoma samples .................................... 164
