ACKNOWLEDGEMENTS

My dream and aim of achieving a doctorate has been successfully given wings by ICT. The years spent in this prestigious institute have given my mind much food for thought and my knowledge bank has gained many much more. This journey of my life in ICT has been very memorable and exciting.

I would like to thank Dr. Manjari Mukherjee who gave genesis to my Ph.D project idea and I shall always be indebted to her. Thanks will only be a small word from the dictionary to express my gratitude to my guide Prof. Rekha S. Singhal who has been an excellent pillar of support. Without her ideas and help, this project would have never seen a logical end. I also take this opportunity to thank Prof. Smita Lele, who gave us the strength to work on our problems. I must definitely mention Dr. Madhuri Hegde, from Emory University, who has been exceptionally selfless and guided us through a major learning and practical part of our project as well as providing all the technical facilities. Miss. Shrutti Bhide, a bioinformatics professional from the same university also has been a major pillar of support and I thank her from the bottom of my heart. Dr. Arunkanth Ankala, a post-doctorate fellow from Emory University has played a key role in adding significance to my project and without him much could not have been achieved. I also thank Devin from Emory, who has provided all the technical knowledge for a part of my project.

I would like to thank Prof. G.D. Yadav, present Vice Chancellor of ICT, for providing the necessary space and resources for carrying out my work. Thanks to Cumballa Hill Hospital and Heart Institute for giving me access to DNA samples. I extend my thanks to all the non-teaching staff of ICT and Food Engineering & Technology department. It is their effort which goes a long way in helping each and every student of the department. I am sincerely thankful to Balaji and Rahul.
without them most of my literature survey wouldn't have been possible. I will always be indebted to my lab-mates and friends Ashiwni, Chetana, Shruti and Prakruti for their endless support in all matters. Thanks to Furqan and Sarisha for their support in the initial stages of my project. Thanks to my new friends and lab juniors Anuja and Bincy for always being around for me. A hearty thanks to all my department friends: Shilpa, Jyoti, Swarali, Shraddha, Mangesh, Chirag, Shripad and many more who have been there for me.

My world outside ICT is small but filled with wonderful people who in their very own way have contributed for my success today. My parents for always understanding and supporting me in all the decisions in my life. My Husband Mr. Sriram Iyer, inspite of not being from the science background, has always thought highly of my work and always encouraged me to do more and support me. My in-laws for being very understanding and supportive of my career decision. I have to thank all my cousins, childhood and school friends who have asked me endless queries about all facets of my project which gave me the strength to do more.

Last but not the least, the Almighty for giving me such wonderful people in my life who have contributed in all ways and giving me such opportunities to grow and do more.

Sandhya
