List of Figures

Chapter 1: Introduction and literature review

Fig. 1.1 Mature chickpea plants with flowers and pods

Fig. 1.2 Total world production of pulses (5 years average 2000-2004) (www.grainlegumes.com)

Fig. 1.3 Pulses imports (5 years average 2000-2004) (www.grainlegumes.com)

Fig. 1.4 (A) Chickpea field showing healthy plants (B) Healthy and wilt infested chickpea plants (C) Wilt infested chickpea plant showing wilting symptoms

Fig. 1.5 (A) Dried chickpea plant showing wilting symptoms (B) Transverse section of chickpea root showing browning of xylem

Fig. 1.6 Life cycle of vascular wilt pathogen- Fusarium oxysporum f. sp ciceris

Fig. 1.7 Geographic location of occurrence of Foc races in India

Fig. 1.8 Dendrogram derived from RAPD analysis of 57 Fusarium oxysporum f. sp. ciceris isolates

Fig. 1.9 Inferred phylogeny of races within Fusarium oxysporum f. sp. ciceris

Fig. 1.10 Classical method of Foc race identification using chickpea differential cultivars

Fig. 1.11 Host pathogen interactions (Nimbalkar, 2007, Ph.D. thesis)

Fig. 1.12 Various approaches to study the Chickpea-Fusarium oxysporum interactome

Chapter 2: Materials and methods

Fig. 2.1 Collection sites of various Foc races across India

Fig. 2.2 Growth patterns of Indian Foc races on PDA plates

Fig. 2.3 C. arietinum cultivars JG62 and Digvijay used in the present study

Fig. 2.4 Designing gene specific oligonucleotides

Fig. 2.5 The Mascot peptide mass fingerprint web page

Fig. 2.6 Hydroponic culture of chickpea plants

Chapter 3: Results

Fig. 3.1 Identification of Foc races using gene specific oligonucleotides

Fig. 3.2 DNA sequences of Hop78, Cut, Xyl and Dst genes

Fig. 3.3 Conserved domains of Xyl gene and Hop78 transposon

Fig. 3.4 ITS region of Foc race 1

Fig. 3.5 ITS-RFLP patterns of Foc races

Fig. 3.6 AFLP profile of Foc races and isolates using primer combination E-aa/m-caa

Fig. 3.7 AFLP profile of Fusarium oxysporum f. sp. ciceri DNA

Fig. 3.8 (A-M) represent sequences of race specific AFLP fragments
Fig. 3.9  Most-parsimonious tree inferred from the partial EF-1α DNA sequence data of *Foc*.

Fig. 3.10  Proteomic profiles of *Foc* filtrate and mycelial proteins.

Fig. 3.11  MALDI/MS spectra obtained with CHCA matrix for the race 4 mycelial protein sample (m4.4) located on 1DE gel.

Fig. 3.12  *Foc* race infected and uninfected JG62 and Digvijay chickpea varieties.

Fig. 3.13  cDNA-RAPD of *Foc* inoculated JG62 (susceptible) and Digvijay (resistant) chickpea cultivars.

Fig. 3.14  Pie diagram showing the percentage of cDNA-RAPD clones representing functional class of genes.

Fig. 3.15  Expression of transcripts in uninoculated and *Foc* 1 inoculated Digvijay (DU and DI) and JG62 (JU and JI) chickpea cultivars at 6 dai.

Fig. 3.16  cDNA normalization using ITS primers.

Fig. 3.17  *Fgb1* gene expression profile in *Foc* races 1, 2 and 4 inoculated JG62 and Digvijay.

Fig. 3.18  Graphical representation of *Fgb1* gene expression profile in chickpea cultivars inoculated with *Foc* races 1, 2 and 4.

Fig. 3.19  *Gas1* gene expression profile in *Foc* races 1, 2 and 4 inoculated JG62 and Digvijay.

Fig. 3.20  Graphical representation of *Gas1* gene expression profile in chickpea cultivars inoculated with *Foc* races 1, 2 and 4.

Fig. 3.21  *Chs7* gene expression profile in *Foc* races 1, 2 and 4 inoculated JG62 and Digvijay.

Fig. 3.22  Graphical representation of *Chs7* gene expression profile in chickpea cultivars inoculated with *Foc* races 1, 2 and 4.

Fig. 3.23  *Fow1* gene expression profile in *Foc* races 1, 2 and 4 inoculated JG62 and Digvijay.

Fig. 3.24  Graphical representation of *Fow1* gene expression profile in chickpea cultivars inoculated with *Foc* races 1, 2 and 4.

Fig. 3.25  Response of fungal virulence related genes, namely *Fgb1*, *Gas1*, *Chs7* and *Fow1*, in *Foc* 1, 2 and 4 inoculated JG62 and Digvijay from 2-13 dai.

Fig. 3.26  Partial sequences of fungal pathogenesis related genes.

Fig. 3.27  A: *Fow1* deduced amino acid sequence alignment depicting conserved motifs. B: *Fgb1* partial amino acid sequence showing GH (blue colour) and WD (yellow colour) domains (conserved domains).

Fig. 3.28  Mapping of *Foc* virulence related genes on *G. zeae* genome.

Fig. 3.29  Exact chromosomal locations *Foc* virulence genes on *G. zeae* genome.

Fig. 3.30  cDNA normalization using 18s rRNA primers.

Fig. 3.31  *GroES2* gene expression profile in chickpea inoculated with *Foc* races 1, 2 and 4.

Fig. 3.32  Graphical representation of *GroES2* gene expression profile in chickpea cultivars inoculated with *Foc* races 1, 2 and 4.
Chapter 4: Discussion

Fig. 4.1 Fungal metabolism during stress and starvation conditions
Fig. 4.2 Fungal genes involved in plant cell wall degradation
Fig. 4.3 Fungal gene involved in signaling cascades
Fig. 4.4 Different pathways leading to fungal virulence
Fig. 4.5 The rRNA gene structure
Fig. 4.6 Schematic representation of *Fusarium* virulence genes and chickpea defense genes involved in the host-pathogen studies accomplished in this research work
